Symbols for Climatological Data Table:--The departures from the normal temperature are computed from the averages of the entire period for stations having 10 r more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period or stations with 10 to 14 years the means for the period of record are used §Also on other dates. **Not used in means and summaries ‡‡Evaporation station. †Post office addresses (see notes for daily precipitation table). T. Trace, or precipitation less than 0.01 inch. Reference letters [a], [b], [c], number of days missing.

Symbols for Daily Precipitation Table:--Except as otherwise indicated. observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at time of observation. [1]Precipitation is for the 24-hour period, midnight to midnight. [2]Precipitation measured in morning; amount recorded is for the preceding 24 hours. [3]Indeterminate. ‡Precipitation measured with recording gage. *Included in the next measurement. T. Trace, or precipitation less than 0.01 inch ‡‡Evaporation Station. †Post Office addresses as follows:—Alum Fork Reservoir, Paron; Beaty Lake, Forest City; Bethesda, Batesville; Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Cold Springs, Olio; Devils Knob, Salus; Eagle Gap, Eagleton; Eleven Point, Route 1, Ravendon Springs; Fordyce, Route 1, Fordyce; Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock Heber Springs, Tumbling Shoals; Highland, R.F.D.3, Nashville; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Rosebud, Route 2, Mt. Vernon; Sheridan, Hensley; Sparkman, Rt. Sparkman; Stamps, Buckner; Turnpike, Dover: Walnut Grove, Cord; White Rock, Route 2, Winslow.

Symbols for Daily Maximum and Minimum Temperatures:--Thermometers read near sunset unless otherwise indicated. ***Midnight to midnight. §§Thermometers read in the morning, maximum temperature then read is charged to the previous day on which they almost always occur. ‡‡Evaporation station. NR, No record.

ARKANSAS SECTION

WALTER C. HICKMON

Vol. XLIX Little Rock, Ark., June, 1944 No. 6

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents Washington, D. C.

GENERAL SUMMARY

The month averaged somewhat above normal in temperature and with the exception of last year, was the warmest June since 1936. Cool weather prevailed in all sections from the 6th to 9th inclusive, but above normal temperatures prevailed on other days during the month. About one-fourth of the stations in the State recorded temperatures of 100° or higher on one or more days. Sunshine was ample and there were no reports of destructive windstorms.

Precipitation averaged about an inch below normal for the State as a whole. However, the geographical distribution was poor, ranging from less than an inch at numerous stations in the eastern districts to more than seven inches at a few stations in the western section. Most of the precipitation occurred during the first two weeks, the remainder of June being quite dry. Rivers in the State were at low or falling stages all month.

June was generally favorable for the growth and cultivation of crops. During the first two weeks, frequent showers interfered with cultivation, corn planting, and the harvest of wheat and oats. Fields were becoming grassy by the 15th but dry, sunny weather thereafter was favorable, and fields were generally clean by the end of June. Cotton and corn made good progress. Cotton chopping was largely completed by the 20th, and squares and blooms were reported in some eastern sections by the 25th. Some early planted corn was laid by, and some late corn was planted during the month. Rice made good progress. Soil moisture was becoming deficient in many sections as the month ended.

TEMPERATURE

The mean temperature for the State, as determined from the reports of 79 stations, was 79.2°, which is 2.0° above the 54-year average for June. The highest monthly mean temperature was 83.2° at El Dorado and the lowest was 73.7° at Gilbert. The highest temperature recorded was 102° at Dumas on the 17th, Arkadelphia on the 19th, Pine Bluff on the 27th, and Batesville and Hot Springs on the 28th. The lowest temperature reported was 48° at Harrison and Mammoth Spring on the 7th, and Batesville and Bethesda on the 8th.

PRECIPITATION

The average precipitation for the State, as determined from the reports of 105 stations, was 3.04 inches, which is 0.99 inch below the 54-year average for June. The greatest monthly amount was 10.30 inches at White Rock, and the least was 0.34 inch at Portland. The greatest amount reported in any 24 consecutive hours was 3.10 inches at Des Ark on the 12-13th.

Symbols for Climatological Data Table:--The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period or stations with 10 to 14 years the means for the period of record are used §Also on other dates. **Not used in means and summaries ‡‡Evaporation station. †Post office addresses (see notes for daily precipitation table). T Trace, or precipitation less than 0.01 inch. Reference letters ^{a}, ^{b}, ^{c}, number of days missing.

Symbols for Daily Precipitation Table:--Except as otherwise indicated, observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at time of observation. [1]Precipitation is for the 24-hour period, midnight to midnight. [2]Precipitation measured in morning; amount recorded is for the preceding 24 hours. [3]Indeterminate. ‡Precipitation measured with recording gage. *Included in the next measurement. T. Trace, or precipitation less than 0.01 inch. ‡‡Evaporation Station. †Post Office addresses as follows:—Alum Fork Reservoir, Paron; Beaty Lake, Forest City; Bethesda, Batesville; Big Lake Outlet, Manila; Boughton, Route 4, Prescott; Cold Springs, Olio; Devils Knob, Salus; Eagle Gap, Eagleton; Eleven Point, Route 1, Ravendon Springs; Fordyce, Route 1, Fordyce; Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock; Heber Springs, Tumbling Shoals; Highland, R.F.D.3, Nashville; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Rosebud, Route 2, Mt. Vernon; Sheridan, Hensley; Sparkman, Rt. Sparkman; Stamps, Buckner; Turnpike, Dover; Walnut Grove, Cord; White Rock, Route 2, Winslow.

Symbols for Daily Maximum and Minimum Temperatures:--Thermometers read near sunset unless otherwise indicated. ***Midnight to midnight. §§Thermometers read in the morning, maximum temperature then read is charged to the previous day on which they almost always occur. ‡‡Evaporation station. NR, No record.

ARKANSAS SECTION

WALTER C. HICKMON

VOL. XLIX LITTLE ROCK, ARK., JULY, 1944 No. 7

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents Washington, D. C.

GENERAL SUMMARY

Temperatures averaged about one-half degree above normal over the State during July. A few stations in the eastern section were slightly cooler than normal but elsewhere departures ranged from one to more than three degrees above the seasonal average. Practically all stations reported maximum temperatures of 100° or higher during the month. The warmest period prevailed from the 9th to 19th when temperatures exceeded 100° every day at many stations. The coolest period was from the 20th to 23d, Brinkley reporting 49° on the 22d. Sunshine was ample.

Precipitation amounted to 71% of normal over the State. A few stations, particularly in the southwestern section, measured less than an inch during the month, while some stations in the Arkansas River Valley recorded more than five inches. The first three weeks of the month were very dry. At Little Rock there was no measurable rainfall from June 13th to July 20th. Most stations recorded their heaviest rains on the night of the 27-28th, with Devils Knob reporting a fall of 4.20 inches.

A severe windstorm swept over the State on July 27th causing considerable damage in many communities. Thirty buildings were damaged at Fort Smith, a soldier was killed at Camp Robinson, and telephone, telegraph and electric service was disrupted in many sections. About 150 telephone circuits were temporarily out of service in the State.

The dry weather of the first three weeks caused many crops to deteriorate. Many fields of corn were injured beyond recovery but late corn on low land was saved by the rains during the last week. Gardens were severely damaged. Cotton suffered less from the drought. Pastures and meadows were brown during most of the month.

TEMPERATURE

The mean temperature for the State, as determined from the reports of 78 stations, was 81.2°, which is 0.6° above the 54 year average for July. The highest monthly mean was 85.8° at El Dorado and the lowest was 77.5° at White Rock. The highest temperature recorded during the month was 108° at Conway on the 18th, and the lowest was 49° at Brinkley on the 22d.

PRECIPITATION

The average precipitation for the State, as determined from the reports of 106 stations, was 2.61 inches, which is 1.09 inches below the 54 year average. The greatest monthly amount was 6.27 inches at Devils Knob and the least was 0.56 inch at White Cliffs. The greatest amount recorded in any 24 consecutive hours was 4.20 inches at Devils Knob on the 27th-28th.

CLIMATOLOGICAL DATA

3

ARKANSAS SECTION

WALTER C. HICKMON

Vol. XLIX Little Rock, Ark., August, 1944 No. 8

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents Washington, D. C.

GENERAL SUMMARY

August temperatures averaged about normal in Arkansas. Mean temperatures ranged from 84° in the extreme southern districts to 74° in the higher elevations of the northwestern section. The first 25 days averaged slightly warmer than normal, but the remainder of the month was quite cool. About one half of the stations reported temperatures of 100° or higher on one or more days. Generally, the month was much more pleasant than the extremely hot weather during August, 1943. Sunshine, although slightly below normal, was adequate.

Precipitation averaged more than an inch above normal over the State and was the heaviest since May. Rainfall was heaviest in the western and southern counties and lightest in the northeastern section. Precipitation was generally adequate for crop growth except at a few stations in the northeastern counties that measured less than two inches. There was an average of nine days with measurable rainfall. On the 25th, 26th, 30th, and 31st, precipitation was quite heavy at many stations. A man was killed by lightning near Fayetteville on the 26th.

August weather was favorable for crop growth. Cotton improved, and picking had started in the southeastern counties by the 15th. Corn and rice made good progress. Good quantities of grapes, peaches, melons, cucumbers, and tomatoes were harvested. Gardens, pastures, and meadows improved during the latter part of the month.

TEMPERATURE

The mean temperature for the State, as determined from the records of 78 stations, was 80.0°, which is 0.1° below the 54-year average for August. The highest monthly mean was 84.6° at El Dorado, and the lowest was 73.9° at Devils Knob. The highest temperature recorded during the month was 104° at England on the 6th, and the lowest was 50° at several stations on the 19th and 28th.

PRECIPITATION

The average precipitation for the State, as determined from the reports of 108 stations, was 4.90 inches, which is 1.31 inches above the 54-year average. The greatest monthly amount was 11.35 inches at Devils Knob, and the least was 0.67 inch at Lake City. The greatest amount recorded in any 24 consecutive hours was 5.15 inches at Warren on the 30-31st.

CLIMATOLOGICAL DATA

ARKANSAS SECTION

WALTER C. HICKMON

Vol. XLIX Little Rock, Ark., September, 1944 No. 9

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents Washington, D. C.

GENERAL SUMMARY

Although the month averaged slightly below normal in temperature, it was warmer than the two preceding Septembers. Cool weather prevailed from the 6th to 14th inclusive, and during this period the lowest temperatures of the month occurred. The highest temperatures were recorded on the 4th and 21st at the majority of stations. However, these extremes did not approach those of previous years. With a preponderance of clear days, sunshine was ample. No destructive winds were reported during the month.

For the State as a whole, precipitation amounted to 56% of the September normal. Stations in the northeastern and northwestern sections reported the largest totals, while stations in Yell, Scott, and adjacent counties measured less than an inch. Gravelly and Steve, both in Yell County, recorded only a trace during the entire month. Most of the precipitation occurred between the 4th and 6th, and on the 27th and 28th, with the heaviest amounts occurring on the latter two days. There was an average of only four days with a measurable amount of rain during September. All streams in the State were at low stages.

The weather during September was very favorable for harvesting fall crops. Warm, sunny days during most of the month favored cotton picking and the harvesting of rice, and both of these activities made good progress. Good crops of hay were cut and stored. Plowing and the sowing of winter grains lagged during the latter part of the month because of the dry soil. The rains of the 27th and 28th benefited late crops and gardens, but at the close of the month, additional copious rains were needed in many sections.

TEMPERATURE

The mean temperature for the State, as determined from the reports of 79 stations, was 73.8°, which is 0.5° below the 54-year average for September. The highest monthly mean temperature was 79.2° at El Dorado, and the lowest was 69.6° at Turnpike. The highest temperature recorded was 103° at Fordyce on the 21st and at Nimrod Dam on the 22d. The lowest temperature was 42° at Mount Ida on the 9th.

PRECIPITATION

The average precipitation for the State, as determined from the reports of 108 stations, was 1.84 inches, which is 1.45 inches below the 54-year average for September. The greatest monthly total was 4.61 inches at Osceola, and the least was a trace of rain at Gravelly and Steve. The greatest amount recorded in any 24-hour period was 3.30 inches at Osceola on the 28th-29th.

ARKANSAS SECTION

WALTER C. HICKMON

VOL. XLIX LITTLE ROCK, ARK., OCTOBER, 1944 No. 10

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents Washington, D. C.

GENERAL SUMMARY

The month averaged about one degree above normal in temperature. The first and last weeks of October were quite warm, with daily excesses in temperature ranging up to 10°. The coldest weather prevailed from the 8th to 15th inclusive, when freezing temperatures and scattered killing frosts were reported from some northern stations. The majority of stations recorded their highest temperatures of the month on the 6th, and maxima of 90° or higher were quite common early in the month. There was an average of 22 clear, 6 partly cloudy, and 3 cloudy days. This unusually large number of clear days resulted in a high percentage of sunshine and a very large daily range in temperature. At Little Rock the average daily temperature range was 29°, the highest of record. On two days the temperature range was 41°.

Precipitation amounted to only 36% of normal in Arkansas during the month. It was the driest October since 1938 and one of the driest of record. It was the driest October of record at Little Rock and several stations in the southern section. A few stations in the extreme northwestern section had adequate rainfall, but elsewhere amounts were insufficient to maintain soil moisture. Precipitation was very light over the southern half of the State, several stations reporting no rain during the month. Very little rain occurred after the first week in October, and the drought had become quite intense by the end of the month.

October weather was ideal for harvesting crops. Cotton picking made good progress where there was adequate labor and was about 75% completed by the end of the month. Corn matured and was being gathered. Plowing and the planting of fall grains were delayed because of dry soil. At the end of the month forest fires were numerous, and the fire hazard was extremely great.

TEMPERATURE

The mean temperature for the State, as determined from the reports of 78 stations, was 63.9°, which is 1.1° above the 54 year average for October. The highest monthly mean temperature was 68.6° at Hot Springs, and the lowest was 59.3° at Gilbert. The highest temperature recorded was 95° at Waldron on the 3d and at Des Arc on the 7th. The lowest temperature was 25° at Gilbert on the 13th.

PRECIPITATION

The average precipitation for the State, as determined from the reports of 106 stations, was 1.13 inches, which is 2.04 inches below the 54-year average for October. The greatest monthly total was 4.38 inches at Bentonville, and the least was none at Cummins farm, Fordyce, Steve, Stuttgart, and Tichnor. The greatest amount recorded in any 24-hour period was 3.63 inches at Bentonville on the 2d-3d.

CLIMATOLOGICAL DATA

3 ARKANSAS SECTION

WALTER C. HICKMON

Vol. XLIX Little Rock, Ark., November, 1944 No. 11

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents Washington, D. C.

GENERAL SUMMARY

November temperatures averaged about one and one half degrees above normal. Temperatures were almost continually above the seasonal average during the first fifteen days and exceeded 80° at times, especially during the first three days. After the 15th cooler weather prevailed, and freezing temperatures were recorded on a few mornings during the latter part of the month. The first general killing frost occurred on the 28th when temperatures were below 20° at several stations. Cloudy days were quite prevalent during November, and sunshine was below normal.

Precipitation was adequate in most sections of Arkansas during November, averaging about an inch above normal for the State as a whole. A few stations in the northwestern section reported less than two inches, while the majority of stations in the southern counties measured over five inches. The heaviest rains of the month fell on the 7th and 8th, some stations measuring over four inches in a 24-hour period. General rains also occurred on the 14th, 18th-19th, and 24th-25th. A few northern stations reported snow flurries on the 28th.

The November rains, following an extremely dry October, did much to restore the greatly depleted moisture supply. Winter grains improved, and numerous forest fires over the the State were extinguished. Farm activities were mostly confined to chores, wood cutting, and butchering, although some cotton was picked and late corn gathered.

TEMPERATURE

The mean temperature for the State, as determined from the reports of 79 stations, was 52.7°, which is 1.4° above the 54-year average for November. The highest monthly mean temperature was 57.4° at Okay, and the lowest was 45.6° at Turnpike. The highest temperature recorded was 87° at Pine Bluff on the 1st. The lowest temperature was 17° at Gilbert and Mount Ida on the 28th.

PRECIPITATION

The average precipitation for the State, as determined from the reports of 106 stations, was 4.70 inches, which is 0.97 inch above the 54-year average for November. The greatest monthly total was 8.97 inches at Hope, and the least was 1.35 inches at Fayetteville. The greatest amount recorded in any 24-hour period was 6.08 inches at Eagle Gap on the 7th and 8th.

CLIMATOLOGICAL DATA

ARKANSAS SECTION

WALTER C. HICKMON

VOL. XLIX LITTLE ROCK, ARK., DECEMBER, 1944 No. 12

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents Washington, D. C.

GENERAL SUMMARY

With temperatures averaging almost five degrees below normal, this was the coldest December since 1935 and one of the coldest since 1890. Also it was the coldest month of the current year. Although temperatures were not abnormally low, cold weather persisted throughout the month. There were approximately twice as many mornings with freezing temperatures as usually occur during December. However, no subzero temperatures were experienced. Cloudiness was above the average, consequently sunshine was deficient.

Precipitation in December ranged from less than three inches in the northwestern sections to more than fourteen inches in the southeastern district. For the State as a whole it was the wettest December sn more than fifty years, and the wettest month of the current year. Rainfall was quite general and heavy from the 5th to 7th and again from the 25th to 29th. Many stations in the southern section reported more than three inches in a 24-hour period on the 5th-6th. Snowfall was light, ranging from flurries to three inches. Glaze was quite general during the last week, resulting in hazardous driving conditions, especially in the mountainous sections.

The heavy rains caused rises on the Ouachita River to crests above flood stage on two occasions. Flooding was negligible at Arkadelphia, but at Camden considerable bottom land was inundated at the close of the month.

Because of the cold wet weather, farm work was confined to chores, butchering, and wood cutting.

TEMPERATURE

The mean temperature for the State, as determined from the reports of 78 stations, was 38.0°, which is 4.8° below the 54-year average for December. The highest monthly mean temperature was 44.4° at Camden, and the lowest was 33.0° at Devils Knob. The highest temperature recorded was 76° at Marshall on the 20th, and the lowest was 4° at Gravette on the 12th.

PRECIPITATION

The average precipitation for the State, as determined from the reports of 105 stations, was 7.86 inches, which is 3.59 inches above the 54-year average for December. The greatest monthly total was 14.37 inches at Warren, and the least was 2.29 inches at Odell. The greatest amount recorded in any 24 hour period was 6.48 inches at Crossett on the 30th-31st.

B.N.W.

MISCELLANEOUS PHENOMENA

Dates of

Thunderstorms:---17,18,24,25.
Heavy Fog:---5,8,23,24,25,29,30,31.
Glaze:---26,27,28.
Sleet:---3,4,9,21,28.
High Winds:---11,20,21.

ARKANSAS SECTION

WALTER C. HICKMON

VOL. XLIX LITTLE ROCK, ARK., YEAR, 1944 No. 13

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents Washington, D. C.

GENERAL SUMMARY

The annual mean temperature for Arkansas was slightly higher than the average of the past 54 years. Considering individual stations, annual means ranged from 66.2° at El Dorado to 57.2° at Devils Knob and Gilbert. February was much warmer than average. December averaged almost 5° colder than normal, being the coldest month of the year and the second coldest December since 1917. Departures from monthly mean temperatures were less pronounced during other months of the year. The lowest temperatures of the year occurred on January 9th when minima were considerably below zero at a few northern stations. The hottest weather of the year occurred from July 9th to 19th, when daily temperatures frequently exceeded 100° over most of the State.

Precipitation averaged about seven inches above normal for the State as a whole. A few stations in the southern half of the State recorded more than seventy inches for the year while a few in the northern counties measured less than forty inches. February, March, April, May, and December were quite wet, and July, September, and October quite dry. The period from the middle of June to the first part of November was very dry, with some stations reporting more than thirty consecutive days without rain.

Tornadoes caused a considerable loss of life and much property damage in April. Forty-four people were killed and property damage exceeded $700,000. In March a severe hailstorm occurred in Poinsett County, causing much property damage. Severe windstorms in July accounted for additional property damage over much of the State.

On the whole, the weather was favorable for crop growth during 1944. Although heavy and frequent rains during the spring delayed planting and cultivation, the additional soil moisture helped to mitigate the effects of the drought which developed in the late summer and fall. Generally ideal weather prevailed for the harvesting of fall crops. No disastrous floods occurred during the year, and only a small acreage of crop land was inundated by minor floods.

ARKANSAS RIVER

No flooding of any consequence occurred along the Arkansas River during the year. Crests werc slightly above flood stage early in May. Farmers suffered some loss because of flooded bottom land, and the necessity of replanting crops.

WHITE AND BLACK RIVERS

No serious floods occurred on these rivers during the year. Crests were slightly above flood stage on the White River below Newport in April and May but flood loss was negligible. The Black River was in flood for about a month in April and May at Black Rock. The resulting overflow delayed spring farm operations in the vicinity.

OUACHITA AND RED RIVERS

The Ouachita River was in flood several times during the year. The most serious flood occurred early in May when the river reached 26 feet at Arkadelphia and 42 feet, the highest of record, at Camden. The lower Ouachita was in flood a good portion of the time from March to the middle of May. It is estimated that 450,000 acres were overflowed, and flood loss was quite extensive, mostly in livestock and delayed farm operations. Only slight flooding occurred on the Little and Red rivers during the spring months, and property loss was small.

WEATHER BY MONTHS

January:—The month averaged slightly warmer than normal. The first half of the month was quite cold, and many stations in the northern section reported subzero temperatures on the 9th. The second half of the month was quite mild, with temperatures frequently exceeding 70°. Precipitation was below normal, and some northern stations reported less than an inch. The heaviest snowfall in years occurred on the night of the 7th-8th, some stations measuring over 12 inches.

February:—The month was considerably warmer and wetter than normal. Temperatures were below normal from the 11th to 19th, but mild weather prevailed at other times during the month. Precipitation averaged more than seven inches, and it was the third wettest February of record. The frequent rains hindered spring farm operations.

March: —Temperatures averaged slightly below normal. The lowest temperatures of the month occurred on the 8th, minima ranging from slightly below freezing in the southern section to 14° in the Ozarks. The Ouachita and the lower portion of the White river were in flood during the month. On the night of the 26th a very severe hailstorm caused considerable damage in Poinsett County. The communities of Marked Tree and Lepanto suffered the greatest loss.

April:—Temperatures averaged slightly below normal. Unseasonably cold weather prevailed from the 3d to 5th with temperatures as low as 19° in the northern section. Spring farm operations were delayed by frequent rains, wet soil, and flooded lowlands. A series of tornadoes on the 10th and 14th resulted in the deaths of 44 people and much property damage over the State.

May:—The month averaged about a degree above normal in temperature A few northwestern stations reported freezing temperatures and killing frosts during the first week. Heavy rains early in the month resulted in some flooding along the Arkansas. White, Black and Ouachita rivers. Generally favorable weather aided planting and other farm activities.

June:—Temperatures averaged about a degree above normal. Precipitation was adequate for crop growth in the western sections, but many stations in the eastern counties measured less than an inch. Showers were infrequent during thesecond half of the month; consequently, cultivation, corn planting, and the harvesting of wheat and oats made excellent progress.

July:—The average temperature for the State was close to normal. Temperatures of 100° or higher occurred frequently from the 9th to 19th. A severe windstorm swept over the State on the 27th causing considerable property damage in many communities. Dry weather during the latter part of June and the first two weeks of July caused many crops and gardens to deteriorate. Some fields of corn were damaged beyond recovery.

August:—Near-normal temperatures and adequate rainfall in most sections were of much benefit to growing crops. The condition of all crops improved, and cotton picking had started by the 15th. Good quantities of grapes, peaches, melons, and tomatoes were harvested.

September:—Temperatures averaged near normal, but precipitation was deficient. Warm, sunny days favored the harvesting of crops. Plowing and the sowing of winter grains lagged because of dry soil.

October:—Temperatures averaged slightly above normal. The first and last weeks of the month were quite warm. The coldest weather was experienced between the 8th and 15th, when freezing temperatures and scattered killing frosts occurred at some northern stations. This was one of the driest Octobers of record. The weather was ideal for harvesting crops.

November:—Temperatures were almost continually above normal during the first half of the month but cooler weather prevailed during the latter half. Killing frost was quite general on the 28th. Precipitation was adequate in most sections.

December:—This was the coldest month of the current year and the second coldest December since 1917. However, there were no unusually low temperatures. Precipitation was considerably above normal, and exceeded 12 inches at some stations in the southeastern sections.

*Indicates freezing temperature, no killing frost reported.

The departures from normal temperature and precipitation are computed from averages of the entire period for stations having 10 or more years of record.

T., less than 0.01 inch rain or melted snow. Reference letters a, b, c, appearing in the table indicate number of days missing. § Also on later dates.

CLIMATOLOGICAL DATA

ARKANSAS SECTION

WALTER C. HICKMON

VOL. L LITTLE ROCK, ARK., JANUARY, 1945 No. 1

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents Washington, D. C.

GENERAL SUMMARY

No unusual weather phenomena occurred during the month. The mean temperature averaged slightly below normal for the State as a whole. Warm and cool periods alternated at frequent intervals, but there were no unusually high or low temperatures. This was the first January in several years during which no subzero temperatures were reported in the State. However, freezing temperatures were experienced to the southern border of the State on several occasions. Sunshine was somewhat above normal.

Precipitation amounted to 56% of normal for the State as a whole. The heaviest amounts were recorded in the extreme southern section, some stations measuring over five inches. A few stations in the extreme northern and northwestern counties reported less than an inch of precipitation during the month. Generally, precipitation was adequate in the eastern half and deficient in the western half of the State. Most of the precipitation fell during two periods, 6th-7th and 18th-19th. Snowfall was about normal, ranging from flurries in the southern section to seven inches in the Ozarks. Most of the snow fell on the 2d, 3d, and 28th.

Farm work was confined mostly to chores, although some plowing, pruning and spraying was accomplished. Winter grains made good progress, and livestock continued in fair to good condition.

As a result of the heavy rains late in December, the lower portion of the Ouachita River was in flood during the first part of the month. Considerable lowland was flooded but crop damage was negligible.

TEMPERATURE

The mean temperature for the State, as determined from the reports of 79 stations, was 40.2,° which is 1.0° below the 55-year average for January. The highest monthly mean temperature was 45.6° at Warren, and the lowest was 34.8° at Mammoth Spring. The highest temperature recorded was 80° at Perryville on the 14th, and the lowest was 7° at Lead Hill on the 29th.

PRECIPITATION

The average precipitation for the State as determined from the records of 105 stations was 2.37 inches, which is 1.87 inches below the 55-year average for January. The greatest monthly total was 7.52 inches at Portland, and the least amount was 0.53 inch at Evening Shade. The greatest amount recorded in any 24-hour period was 2.82 inches at El Dorado on the 18th-19th.

B.N.W.

MISCELLANEOUS PHENOMENA
Dates of

Thunderstorms:---6,12,14,18.

Heavy Fog:---3,4,5,6,7,12,13,18,19,20,21,22,28.

Sleet:---2,3,7,17,18,19.

High Winds:---1,8,9,15,25,27.

WALTER C. HICKMON

Vol. L LITTLE ROCK, ARK., FEBRUARY, 1945 No. 2

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents Washington, D. C.

GENERAL SUMMARY

February temperatures averaged close to normal for the State as a whole. Considering individual stations, monthly average temperatures ranged from 51.4° at Portland to 38.0° at Devils Knob. The first eight days were quite cold, but warm and cool periods alternated frequently during the remainder of the month. Practically all stations recorded the highest temperature of the month on the 15th but the lowest temperatures occurred on various dates at different stations. No subzero temperatures occurred, and minima were somewhat higher than in several preceding years. There was much cloudiness during the month, consequently sunshine was deficient.

Precipitation was very heavy in most sections of the State. This was the wettest February since 1939 and the second wettest since 1890. Stations in the west-central section of Arkansas measured more than ten inches. Rain fell at frequent intervals during the month, the intervening dry periods averaging only two or three days in duration. Precipitation was quite heavy on the 20th-21st and 26th-27th, some stations measuring more than three inches during a 24-hour period. Snowfall was below normal in all sections.

A very severe ice storm occurred on the 26th and 27th. The freezing rain covering trees, shrubbery, wires, and highways with a thick coating of ice. The weight of the ice caused many trees to be uprooted, and many communication and power lines were broken. Telephone and telegraph service was severely crippled for several days following the storm. Bus service was suspended for about a day on some highways.

The heavy rains during the latter part of February caused sharp rises on all the rivers in the State. Only the Arkansas River failed to flood, although the river was less than a foot below flood stage at Dardanelle on the 27th. At the close of the month the Ouachita, Black, and most of the White rivers were in flood and rising.

February weather was decidedly unfavorable for farmers, and little outside work, such as plowing and planting, was accomplished during the latter two weeks of the month. Also, much lowland near the rivers was inundated, and this will further delay spring farm operations. However, the rains improved meadows, pastures, and winter grains. As the month ended, some fruit trees were budding, and gardens were being planted in the extreme southern section of the State. B.N.W.

TEMPERATURE

The mean temperature for the State, as determined from the reports of 78 stations, was 44.1°, which is 0.4° above the 55-year average for February. The highest monthly mean temperature was 51.4° at Portland and the lowest was 38.0° at Devils Knob. The highest temperature recorded was 88° at Morrilton on the 15th, and the lowest was 12° at Mammoth Spring on the 1st.

PRECIPITATION

The average precipitation for the State, as determined from the reports of 106 stations, was 7.86 inches, which is 4.35 inches above the 55-year average for February. The greatest monthly total was 11.40 inches at Dardanelle, and the least was 4.96 inches at Dumas. The greatest amount recorded in any 24-hour period was 4.34 inches at Fort Smith Water Plant on the 19th-20th.

CLIMATOLOGICAL DATA

ARKANSAS SECTION

WALTER C. HICKMON

VOL. L LITTLE ROCK, ARK., MARCH, 1945 No. 3

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents Washington, D. C.

GENERAL SUMMARY

March temperatures were considerably above normal in Arkansas, the State average of 58.9° being exceeded only in 1938, 1921, and 1908. Mean temperatures at individual stations ranged from 63.8° at Warren to 53.0° at Bentonville. The coldest weather of the month was experienced on the 1st, 7th, and 8th when minimum temperatures ranged from near 32° in the southern section to 20° or slightly lower at stations in the northwestern counties. Temperatures were considerably above normal almost every day after the 9th.

With an average precipitation of 11.12 inches for the State, this was the wettest March on record, and in the past 55 years only January 1937, and April, 1927 have had more rainfall. Precipitation was above normal at all stations but the greatest excesses occurred in Montgomery and adjacent counties where some stations measured over 18 inches during the month. Rainfall was extremely heavy in some sections on the 18th-19th and 29th-30th, many stations measuring over four inches in a 24-hour period. No snowfall occurred in the State during the month but light sleet was observed in the northern section early in the month.

As a result of these heavy rains, most of the rivers in the State were in flood, and thousands of acres of bottom lands were inundated. These floods, together with the prevailing rainy weather, prevented farmers from plowing and planting, except on the drier uplands. Spring farm work is now more than a month behind an average season. Winter grains and meadows are in a thriving condition.

TEMPERATURE

The mean temperature for the State, as determined from the reports of 78 stations, was 58.9°, which is 6.3° above the 55-year average for March. The highest monthly mean temperature was 63.8° at Warren, and the lowest was 53.0° at Bentonville. The highest temperature recorded was 92° at Camden on the 26th, and the lowest was 16° at Gravette on the 7th.

PRECIPITATION

The average precipitation for the State, as determined from the reports of 101 stations, was 11.12 inches, which is 6.35 inches above the 55-year average for March. The greatest monthly total was 18.97 inches at Pine Ridge, and the least was 4.95 inches at Wilson. The greatest amount recorded in a 24-hour period was 7.01 inches at Oden on the 29th-30th.

All departures from normal are computed from the averages of the entire period for stations having 10 or more years of record, except that for First Order Weather Bureau Stations they are based on adopted normals. Figures and letters following stations indicate distance from the City P.O., unless otherwise indicated. T., trace or 0.001 inch or less. [a],[b],[c], etc., number days missing, example, [b]indicates 2 days missing. §Partly interpolated. †And other dates. ‡Received too late to be included in means and summaries. Except as otherwise indicated, amounts are for 24hours ending late in the afternoon. [1] Midnight to midnight. [2]Measured in the morning for the preceding 24 hours. [3]Data for 24 hours ending at 11:30 a. m. of the following day. [4]Best available used for stations not equipped with recorders. [5]Recording gage. *Included in next measurement. // Windshield on gage. /Instruments are read in the morning: the maximum temperature thereof is charged to the preceding day, on which it most always occurs. ***Post Office addresses as follows: Alum Fork Reservoir, Paron; Beaty Lake, Rt. 1, Madison: Bethesda, Batesville: Big Lake Outlet, Manila: Boughton, Route 4, Prescott: Cold Springs, Olio; Cummins Farm, Gould; Devils Knob, Salus: Eagle Gap, Eagleton: Eleven Point, Route 1, Ravendon Springs: Fordyce, Route 1, Fordyce: Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Rosebud, Route 2, Mt. CLIMATOLOGICAL DATA

ARKANSAS SECTION

WALTER C. HICKMON

VOL. L LITTLE ROCK, ARK., APRIL, 1945 No. 4

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents Washington. D. C.

GENERAL SUMMARY

April weather was mild and wet. Temperatures averaged above normal at practically all stations. Cool weather was experienced from the 4th to 7th, with freezing temperatures on some mornings in the northern section. Another comparatively cool period prevailed on the last five days of the month, and killing frost was observed in some localities. Most stations reported their warmest weather between the 11th and 15th, and their highest temperatures of the month on the 13th.

Precipitation averaged about two and one half inches above normal for the State as a whole. Many stations in the north and northwestern sections measured more than ten inches during the month. Rainy days occurred at frequent intervals, and the number of days with a measurable amount of precipitation averaged considerably above normal. The heaviest rains occurred on the 1st, many stations measuring more than four inches in a 24 hour period.

These heavy rains, following the excessively heavy precipitation in March, resulted in continued high stages on the rivers in the State. Disastrous floods occurred on the Red, White, and Ouachita rivers, and considerable flooding occurred along the Arkansas River. Thousands of acres of fertile land in these valleys were flooded, and many residents were forced to move from their homes. Much highway and rail traffic was detoured over other routes.

Tornadoes killed 22 people, injured many more, and caused considerable property destruction in Logan, Johnson, and Madison counties on April 12th. Much timber in those counties was blown down.

Adverse weather conditions in April caused further delay in planting and cultivating, and farm operations are now much behind an average season. Some progress was made on the drier uplands, but generally the crop outlook for the current year is rather gloomy.

TEMPERATURE

The mean temperature for the State, as determined from the reports of 77 stations, was 62.6°, which is 1.1° above the 55-year average for April. The highest monthly mean temperature was 68.4° at El Dorado, and the lowest was 56.4° at Devils Knob. The highest temperature recorded was 89° at Hot Springs on the 3d, the lowest was 23° at Gravette on the 5th.

PRECIPITATION

The average precipitation for the State, as determined from the reports of 104 stations, was 7.44 inches, which is 2.43 inches above the 55-year average for April. The greatest monthly total was 16.84 inches at Odell, and the least was 2.12 inches at Story. The greatest amount recorded in a 24-hour period was 4.80 inches at Fordyce on the 1st.

All departures from normal are computed from the averages of the entire period for stations having 10 or more years of record, except that for First Order Weather Bureau Stations they are based on adopted normals. Figures and letters following stations indicate distance from the City P.O., unless otherwise indicated. T., trace or 0.001 inch or less. [a],[b],[c], etc., number days missing, example, [b]indicates 2 days missing. §Partly interpolated. †And other dates. ‡Received too late to be included in means and summaries. Except as otherwise indicated, amounts are for 24hours ending late in the afternoon. [1] Midnight to midnight. [2]Measured in the morning for the preceding 24 hours. [3]Data for 24 hours ending at 11;30 a. m. of the following day. [4]Best available used for stations not equipped with recorders. [5]Recording gage. *Included in next measurement. // Windshield on gage. /Instruments are read in the morning: the maximum temperature then read is charged to the preceding day, on which it most always occurs. ***Post Office addresses as follows: Alum Fork Reservoir, Paron; Beaty Lake, Rt. 1, Madison: Bethesda, Batesville: Big Lake Outlet, Manilla: Boughton, Route 4, Prescott: Cold Springs, Olio; Cummins Farm, Gould; Devils Knob, Salus; Eagle Gap, Eagleton; Eleven Point, Route 1, Ravendon Springs: Fordyce, Route 1, Fordyce: Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Rosebud, Route 2, Mt. ARKANSAS SECTION

WALTER C. HICKMON

Vol. L Little Rock, Ark., May, 1945 No. 5

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

With temperatures averaging over three degrees below normal, this was the coldest May since 1931 in Arkansas. Cool weather prevailed until the 23d, and daily temperatures exceeded 80° infrequently during that period. There was a reaction to warmer weather on the 24th, and the remainder of the month was more seasonable. Most stations recorded their highest temperature of the month on the 29th or 30th and their lowest on the 5th. Sunshine was somewhat below normal.

May was not so wet as the three preceding months although the average precipitation for the State was slightly above normal. A few stations in the northeastern and the central districts measured over seven inches during the month and some eastern stations reported totals of less than four inches. More than two-thirds of the month's precipitation fell between the 7th and 16th. Heavy rain occurred in practically all sections of the State on the 15th and 16th, many stations measuring from two to more than three inches in a 24 hour period.

As a result of the high stages reached in April, some rivers were still in flood at the beginning of May but were falling at most points. The lower portions of the White and Black rivers continued in flood most of the month. The Ouachita, Petit Jean, and Saline rivers were in flood for short periods following the heavy rains of the middle of the month.

May weather was too cool and wet for planting, growth, and cultivation of crops. Much cotton and corn had to be replanted on low land. Oats were being harvested during the latter part of the month. Pastures and meadows continued in good condition. A severe hailstorm occurred in Howard, northern Hempstead, and southern Pike counties on the evening of May 1st. Some of the stones exceeded an inch in diameter. Damage to orchards and truck crops is estimated at $500,000.

TEMPERATURE

The mean temperature for the State as determined from the reports of 78 stations, was 66.2°, which is 2.9° below the 55-year average for May. The highest monthly mean temperature was 71.8° at El Dorado, and the lowest was 61.2° at Turnpike. The highest temperature recorded was 99° at Morrilton on the 29th, and the lowest was 32° at Gravette, Lead Hill, and Mount Ida on the 5th.

PRECIPITATION

The average precipitation for the State, as determined from the reports of 103 stations, was 5.23 inches, which is 0.26 inch above the 55-year average for May. The greatest monthly total was 8.76 inches at Benton, and the least was 2.70 inches at El Dorado. The greatest amount recorded in a 24 hour period was 3.95 inches at Alum Fork on the 15th.

All departures from normal are computed from the averages of the entire period for stations having 10 or more years of record, except that for First Order Weather Bureau Stations they are based on adopted normals. Figures and letters following stations indicate distance from the City P.O., unless otherwise indicated. T., trace or 0.001 inch or less. ^{a,b,c}, etc., number days missing, example, ^{b}indicates 2 days missing. Italics, interpolated. †And other dates. ‡Received too late to be included in means and summaries. Except as otherwise indicated, amounts are for 24 hours ending late in the afternoon. [1] Midnight to midnight. [2] Measured in the morning for the preceding 24 hours. [3] Data for 24 hours ending at 12:30 a. m. of the following day. [4] Best available used for stations not equipped with recorders. [5] Recording gage. *Included in next measurement. // Windshield on gage. /Instruments are read in the morning; the maximum temperature then read is charged to the preceding day, on which it most always occurs. ***Post Office addresses as follows: Alum Fork Reservoir, Paron; Beaty Lake, Rt. 1, Madison: Bethesda, Batesville: Big Lake Outlet, Manila: Boughton, Route 4, Prescott: Cold Springs, Olio; Cummins Farm, Gould: Devils Knob, Salus: Eagle Gap, Eagleton; Eleven Point, Route 1, Ravendon Springs: Fordyce, Route 1, Fordyce: Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock; Index, Route 5, Texarkana: Lutherville, Route 1, Lamar: Moro Bay Route 3, El Dorado: Morrilton, Route 3, Morrilton: Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Rosebud, Route 2, Mt. VOL. L LITTLE ROCK, ARK., JUNE, 1945 No. 6

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

June temperatures averaged 2° below normal in Arkansas. Cool weather prevailed until the 23d, and temperatures exceeded 90° infrequently during that period. The remainder of the month was more seasonable with maxima above 90° on most days. This was the first June in several years during which no temperatures of 100° were recorded.

Precipitation was unusually heavy in most sections of the State during the month, averaging 9.26 inches for the State as a whole. It was the second wettest June in the past 55 years, being exceeded only in 1928. Rainfall was heaviest in the northern and western counties and lightest in the southeastern section. About 40% of the stations reported more than ten inches during the month. Exceptionally heavy rains fell on the 9th, 10th, and 11th, many stations measuring over four inches in a 24 hour period. Very little rain fell after the 17th.

The heavy rains resulted in flood stages on all the rivers of the State. Crests were not as high as in April however, and flood loss not as extensive. The lower portions of the Black and White rivers were still in flood at the close of the month.

The weather was too cool and wet for cultivation and growth of crops during most of June. During the first three weeks frequent rains interfered with planting and cultivation, and fields became grassy. Cotton and corn especially suffered from the cool weather, and were in rather poor condition at the close of the month. A considerable acreage of crops was lost in the lowlands from the June floods and replanting will again be necessary. The last week of the month was much more favorable. Meadows and pastures continued in excellent condition all month.

TEMPERATURE

The mean temperature for the State as determined from the reports of 79 stations was 75.2°, which is 2.0° below the 55 year average for June. The highest monthly mean temperature was 79.0 at Camden, the lowest was 69.0° at Turnpike. The highest temperature recorded was 98° at Cummins Farm on the 10th and Dumas on the 29th, and the lowest was 43° at Batesville on the 3d.

PRECIPITATION

The average precipitation for the State, as determined from the reports of 103 stations, was 9.26 inches, which is 5.13 inches above the 55 year average for June. The greatest monthly total was 16.42 inches at Calico Rock, and the least was 3.45 inches at Cummins Farm. The greatest amount recorded in a 24 hour period was 7.75 inches at Hope on the 11th-12th.

All departures from normal are computed from the averages of the entire period for stations having 10 or more years of record, except that for First Order Weather Bureau Stations they are based on adopted normals. Figures and letters following stations indicate distance from the City P.O., unless otherwise indicated. T., trace or 0.001 inch or less. ^{a},^{b},^{c}, etc., number days missing, example, ^{b}indicates 2 days missing. Italics, interpolated. †And other dates. ‡Received too late to be included in means and summaries. Except as otherwise indicated, amounts are for 24 hours ending late in the afternoon. [1] Midnight to midnight. [2] Measured in the morning for the preceding 24 hours. [3] Data for 24 hours ending at 12:30 a. m. of the following day. [4] Best available used for stations not equipped with recorders. [5] Recording gage. *Included in next measurement. // Windshield on gage. /Instruments are read in the morning: the maximum temperature then read is charged to the preceding day, on which it most always occurs. ***Post Office addresses as follows: Alum Fork Reservoir, Paron: Beaty Lake, Rt. 1, Madison: Bethesda, Batesville: Big Lake Outlet, Manila: Boughton, Route 4, Prescott: Cold Springs, Olio; Cummins Farm, Gould; Devils Knob, Salus: Eagle Gap, Eagleton: Eleven Point, Route 1, Ravendon Springs: Fordyce, Route 1, Fordyce: Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock: Index, Route 5, Texarkana: Lutherville, Route 1, Lamar: Moro Bay, Route 3, El Dorado: Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry: Odell, Route 1, Canehill: Rosebud, Route 2, Mt. Vernon: Sheridan, Hensley: Stamps, Buckner; Turnpike, Dover: Walnut Grove, Cord; White Rock, Route 2, Winslow.

CLIMATOLOGICAL DATA

ARKANSAS SECTION

WALTER C. HICKMON

Vol. L   Little Rock, Ark., July, 1945   No. 7

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

With temperatures averaging over two degrees below normal, it was the coolest July since 1915 and one of the coolest on record. Cool weather prevailed during the first eighteen days but the remainder of the month was considerably warmer. The highest temperatures of the month occurred between the 23d and 25th at the majority of stations. However, maxima were not as high as in previous years, only about half of the stations experiencing temperatures of 100° or higher.

Precipitation in July resulted mostly from afternoon thundershowers and was adequate in all sections except the northern counties where a few stations measured less than an inch during the month. Most of the stations south of the Arkansas River reported from four inches to more than six inches during July. The greater portion of the month's precipitation fell on three days, 1st, 26th, 27th. No destructive hailstorms occurred during the month but some minor property damage was caused by high winds on the 26th and 27th. The lower portions of the Black and White Rivers were still high in flood early in July but had receded to comparatively low stages by the end of the month.

Despite abnormally cool weather during most of July, most crops made fairly good growth. The growth of cotton and corn was accelerated by the hot weather during the last ten days. Cotton, although small, was blooming and fruiting satisfactorily at the close of the month. Considerable early planted corn was laid by and late planted was well cultivated Truck crops and gardens were in good condition. The harvest of small grains was completed early in the month. Good crops of hay were cut and stored. Meadows and pastures looked unusually good for this time of the year.

TEMPERATURE

The mean temperature for the State as determined from the reports of 77 stations was 78.1°, which is 2.4° below the 55 year average for July. The highest monthly mean temperature was 81.4° at Dumas, the lowest was 74.0° at Turnpike. The highest temperature recorded was 106° at Camden on the 23d, and the lowest was 45° at Marshall on the 18th.

PRECIPITATION

The average precipitation for the State, as determined from the reports of 101 stations, was 3.94 inches, which is 0.23 inch above the 55 year average for July. The greatest monthly total was 9.54 inches at Mount Ida and the least was 0.31 inch at Elevenpoint. The greatest amount recorded in a 24 hour period was 3.69 inches at Mount Ida on the 5th.

All departures from normal are computed from the averages of the entire period for stations having 10 or more years of record, except that for First Order Weather Bureau Stations they are based on adopted normals. Figures and letters following stations indicate distance from the City P.O., unless otherwise indicated. T., trace or 0.010 inch or less. ᵃ,ᵇ,ᶜ, etc., number days missing, example, ᵇindicates 2 days missing. Italics, interpolated. †And other dates. ‡Received too late to be included in means and summaries. Except as otherwise indicated, amounts are for 24 hours ending late in the afternoon. [1] Midnight to midnight. [2]Measured in the morning for the preceding 24 hours. [3]Data for 24 hours ending at 12:30 a. m. of the following day. [4]Best available used for stations not equipped with recorders. [5]Recording gage. *Included in next measurement. // Windshield on gage. /Instruments are read in the morning: the maximum temperature then read is charged to the preceding day, on which it most always occurs. ***Post Office addresses as follows: Alum Fork Reservoir, Paron; Beaty Lake, Rt. 1, Madison: Bethesda, Batesville: Big Lake Outlet, Manilla: Boughton, Route 4, Prescott: Cold Springs, Olio; Cummins Farm, Gould; Devils Knob, Salus: Eagle Gap, Eagleton: Eleven Point, Route 1, Ravendon Springs: Fordyce, Route 1, Fordyce: Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock: Index, Route 5, Texarkana; Lutherville, Route 1. ARKANSAS SECTION

WALTER C. HICKMON

VOL. L LITTLE ROCK, ARK., AUGUST, 1945 No. 8

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

August was the fourth consecutive month with subnormal temperatures in Arkansas. However, the month averaged slightly warmer than in July. The warmest weather occurred during the first week, with the highest temperatures being recorded on the 3d or 4th at practically all stations. Comparatively cool weather prevailed between the 22d and 28th. Several stations reported minima of 48° on the morning of the 27th. There was about the normal amount of sunshine.

August precipitation averaged 88% of normal for the State, and was sufficient to maintain soil moisture in most sections. As would be expected where practically all the precipitation resulted from thundershowers, the rainfall was spotted and varied widely between nearby stations. In Phillips County, for example, Marvell measured only 0.46 inch while Helena reported over three inches. Similar instances of poor distribution occurred over much of the State.

Considering the three months of June, July, and August, this has been the wettest summer since 1928 and one of the wettest on record. Precipitation for the three months totaled 16.36 inches, an excess of almost five inches over normal. Rainfall for the first eight months of the current year has also been much above normal, totalling 50.38 inches for the State compared to a normal amount of 33.92 inches. Normal precipitation for the entire year in Arkansas is 47.92 inches.

All crops made good progress during the month. Cotton made favorable advancement although some nights were too cool for best growth. Picking was becoming quite general in the southern counties during the last week. Corn grew well, except in a few localities where soil moisture was becoming depleted. Most of the early planted corn matured during the month. Considerable hay was cut and stored. Rice made satisfactory progress and some was heading at the close of the month. Late truck crops were generally in good condition. Pastures continued in better than average condition for this time of the year.

TEMPERATURE

The mean temperature for the State as determined from the reports of 78 stations was 78.9°, which is 1.2° below the 55-year average for August. The highest monthly mean temperature was 81.7° at Pine Bluff and the lowest was 74.7° at Turnpike. The highest temperature recorded was 104° at Morrilton on the 3d and 4th. The lowest temperature was 48° which occurred at Mammoth Spring on the 26th, Brinkley on the 27th, and Lead Hill on the 28th.

PRECIPITATION

The average precipitation for the State, as determined from the reports of 103 stations, was 3.16 inches, which is 0.42 inch below the 55-year average for August. The greatest monthly total was 10.53 inches at Dermott and the least was 0.16 inch at Beaty Lake. The greatest amount recorded in a 24 hour period was 4.70 inches at Marshall on the 22d.

ARKANSAS SECTION

WALTER C. HICKMON

Vol. L Little Rock, Ark., September, 1945 No. 9

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

September temperatures averaged only slightly below normal, the deficiency being less than a degree for the State. The weather was warmer than normal from the 1st to 10th, and again from the 19th to 28th. Practically all stations recorded their highest temperatures of the month on the 1st. The coolest weather prevailed from the 10th to 18th, with the lowest temperatures of the month occurring on the 14th or 15th. Sunshine was somewhat below normal.

Precipitation was exceptionally heavy in most sections of Arkansas, averaging almost eight inches for the State as a whole. This was the wettest September since 1913, and the second wettest September of record. Rainfall totalled over 14 inches at some stations in the northwestern section and averaged about 10 inches in the northwestern quarter of the State. In the Ouachita River Valley precipitation was comparatively light, a few stations measuring less than four inches. Heavy rains fell on both the 12th and 25th, many stations measuring over two inches in a 24 hour period.

Most of the rivers in the State rose sharply following the heavy rainfall of the 25th. However, only the Arkansas River was approaching flood stage at the close of the month.

The maturing and harvesting of crops was delayed by too much precipitation during September. The rains that fell during the first half of the month were of considerable benefit to late corn, truck crops, and pastures, but the heavy rains during the last week of the mohth were decidedly unfavorable. As the month ended, the fields were too wet and soft for picking cotton and harvesting corn, and warm dry weather was urgently needed.

TEMPERATURE

The mean temperature for the State, as determined from the reports of 78 stations, was 74.0°, which is 0.3° below the 55-year average for September. The highest monthly mean temperature was 77.9° at Warren and the lowest was 68.6° at Turnpike. The highest temperature recorded was 104° at Morrilton on the 1st, and the lowest was 39° at White Rock on the 13th.

PRECIPITATION

The average precipitation for the State, as determined from the reports of 103 stations, was 7.85 inches, which is 4.48 inches above the 55-year average for September. The greatest monthly total was 14.29 inches at White Rock and the least was 2.25 inches at El Dorado. The greatest amount recorded in a 24 hour period was 5.50 inches at White Rock on the 12th.

All departures from normal are computed from the averages of the entire period for stations having 10 or more years of record, except that for First Order Weather Bureau Stations they are based on adopted normals. Figures and letters following stations indicate distance from the City P.O., unless otherwise indicated. T., less than 0.01 inch. [a], [b], [c], etc., number days missing, example, [b]indicates 2 days missing. Italics, interpolated. †And other dates. ‡Received too late to be included in means and summaries. Except as otherwise indicated, amounts are for 24 hours ending late in the afternoon. [1] Midnight to midnight. [2]Measured in the morning for the preceding 24 hours. [3]Data for 24 hours ending at 12:30 a. m. of the following day. [4]Best available used for stations not equipped with recorders. [5]Recording gage. *Included in next measurement. // Windshield on gage. /Instruments are read in the morning: the maximum temperature then read is charged to the preceding day, on which it most always occurs. ***Post Office addresses as follows: Alum Fork Reservoir, Paron; Beaty Lake, Rt. 1, Madison: Bethesda, Batesville: Big Lake Outlet, Manilla: Boughton, Route 4, Prescott: Cold Springs, Olio; Cummins Farm, Gould; Devil's Knob, Salus: Eagle Gap, Eagleton: Eleven Point, Route 1, Ravendon Springs: Fordyce, Route 1, Fordyce: Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar: Moro Bay, Route 3, El Dorado: Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Rosebud, Route 2, Mt. Vernon: Sheridan, Hensley: Stamps, Buckner; Sugar Loaf Mountain, Heber Springs; Turnpike, Dover: Walnut Grove, Cord; White Rock, Route 2, Winslow.

CLIMATOLOGICAL DATA

ARKANSAS SECTION

WALTER C. HICKMON

VOL. L LITTLE ROCK, ARK., OCTOBER, 1945 No. 10

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

October was cooler than normal in Arkansas, averaging 2.0° below normal for the State as a whole. Although this was the coolest October since 1937 and the second coolest since 1930, only a few northern stations experienced freezing temperatures. The highest temperatures of the month were recorded between the 11th and 13th, and the lowest on the 19th or 25th. This was the first October since 1890 during which a temperature of 90° or higher was not reported in the State.

Precipitation averaged very close to normal, considering the entire State. Although the rainfall was adequate in all sections, it was heaviest in the southern section and lightest in the north central counties. Evening Shade was the only station that measured less than an inch during the month. Most stations measured their heaviest rains on the 1st and 22nd.

Most of the major rivers in Arkansas were rising early in the month as a result of heavy rain during the last week in September. Some flooding occurred along the Arkansas above Little Rock, but property loss was small.

Harvesting of cotton, corn, rice, and other crops proceeded under favorable weather conditions during most of October. Cotton was maturing slowly and a considerable portion of the crop remained to be picked at the end of the month. Ample soil moisture was favorable for plowing, fall grains, and late crops.

TEMPERATURE

The mean temperature for the State, as determined from the reports of 76 stations, was 60.8°, which is 2.0° below the 55-year average for October. The highest monthly mean temperature was 64.4° at Fordyce and the lowest was 55.2° at Gravette. The highest temperature recorded was 89° at Perryville on the 30th, and the lowest was 29° at Lead Hill on the 25th.

PRECIPITATION

The average precipitation for the State, as determined from the reports of 99 stations, was 3.11 inches, which is 0.06 inch below the 55-year average for October. The greatest monthly total was 10.35 inches at Pine Bluff and the least was 0.41 inch at Evening Shade. The greatest amount recorded in a 24 hour period was 6.73 inches at Pine Bluff on Sept. 30th-Oct. 1st.

All departures from normal are computed from the averages of the entire period for stations having 10 or more years of record, except that for First Order Weather Bureau Stations they are based on adopted normals. Figures and letters following stations indicate distance from the City P.O., unless otherwise indicated. T., less than 0.01 inch. a, b, c, etc., number days missing, example, b indicates 2 days missing. Italics, interpolated. †And other dates. ‡Received too late to be included in means and summaries. Except as otherwise indicated, amounts are for 24 hours ending late in the afternoon. 1 Midnight to midnight. 2 Measured in the morning for the preceding 24 hours. 3 Data for 24 hours ending at 12:30 a. m. of the following day. 4 Best available used for stations not equipped with recorders. 5 Recording gage. *Included in next measurement. // Windshield on gage. /Instruments are read in the morning: the maximum temperature then read is charged to the preceding day, on which it most always occurs. ***Post Office addresses as follows: Alum Fork Reservoir, Paron; Beaty Lake, Rt. 1, Madison: Bethesda, Batesville: Big Lake Outlet, Manilla: Boughton, Route 4, Prescott: Cold Springs, Olio: Cummins Farm, Gould; Devils Knob, Salus: Eagle Gap, Eagleton: Eleven Point, Route 1, Ravendon Springs: Fordyce, Route 1, Fordyce: Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock: Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Moro Bay, Route 3, El Dorado: Morrilton, Route 3, Morrilton: Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Rosebud, Route 2, Mt. Vernon: Sheridan, Hensley: Stamps, Buckner; Sugar Loaf Mountain, Heber Springs; Turnpike, Dover: Walnut Grove, Cord; White Rock, Route 2, Winslow.

CLIMATOLOGICAL DATA

ARKANSAS SECTION

WALTER C. HICKMON

VOL. L LITTLE ROCK, ARK., NOVEMBER, 1945 NO. 11

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

November was quite warm in Arkansas, temperatures averaging over two degrees above normal. It was the warmest November since 1942 and the second warmest since 1934. Warm and cool periods alternated at frequent intervals. The highest temperatures of the month occurred on the 1st at most stations, and the lowest temperatures were recorded on the 23d and 24th. Freezing temperatures were recorded to the southern border of the State during the month. Killing frost ended the growing season in most sections on the 22d.

The average precipitation for the State as a whole was slightly above normal. The distribution however, was very uneven, ranging from more than 10 inches at some stations in the eastern counties to less than an inch in the extreme northwestern section. General rains fell in the State on the 9th, 10th, 18th, and 21st. The heaviest rains occurred on the 9th and 10th, several stations measuring over three inches in a 24 hour period. A light snowfall occurred at Paragould on the 30th. All rivers in the State were at low stages during November.

The weather was quite favorable for outside farm work. Cotton picking made fairly good progress but there was still considerable cotton in the fields at the end of the month. The remainder of the corn crop was gathered, and rice threshing was a major activity in the eastern section. Ample moisture over the eastern two thirds of the State favored the growth of winter grains and cover crops. Plowing, butchering, and wood cutting were other farm activities engaged in when weather permitted.

TEMPERATURE

The mean temperature for the State, as determined from the reports of 75 stations, was 53.5°, which is 2.2° above the 55 year average for November. The highest monthly mean temperature was 59.9° at Warren, and the lowest was 45.9° at Gravette. The highest temperature recorded was 88° at Monticello on the 2d. The lowest temperature recorded was 14° at Gilbert on the 24th.

PRECIPITATION

The average precipitation for the State, as determined from the reports of 101 stations, was 3.97 inches, which is 0.24 inch above the 55 year average for November. The greatest monthly total was 11.47 inches at Parkin, and the least was 0.34 inch at Bentonville. The greatest amount recorded in any 24 hour period was 4.71 inches at Georgetown on the 2d and 3d.

All departures from normal are computed from the averages of the entire period for stations having 10 or more years of record, except that for First Order Weather Bureau Stations they are based on adopted normals. Figures and letters following stations indicate distance from the City P.O., unless otherwise indicated. T., less than 0.01 inch. [a], [b], [c], etc., number days missing, example, [b]indicates 2 days missing. Italics, interpolated. †And other dates. ‡Received too late to be included in means and summaries. Except as otherwise indicated, amounts are for 24 hours ending late in the afternoon. [1] Midnight to midnight. [2]Measured in the morning for the preceding 24 hours. [3]Data for 24 hours ending at 12:30 a. m. of the following day. [4]Best available used for stations not equipped with recorders. [5]Recording gage. *Included in next measurement. // Windshield on gage. /Instruments are read in the morning: the maximum temperature then read is charged to the preceding day, on which it most always occurs. ***Post Office addresses as follows: Alum Fork Reservoir, Paron; Beaty Lake, Rt. 1, Madison: Bethesda, Batesville: Big Lake Outlet, Manilla: Boughton, Route 4, Prescott: Cold Springs, Olio; Cummins Farm, Gould; Devils Knob, Salus: Eagle Gap, Eagleton: Eleven Point, Route 1; Ravendon Springs: Fordyce, Route 1, Fordyce: Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock Index, Route 5, Texarkana; Lutherville, Route 1, Lamar: Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton: Mulberry, Route 1, Mulberry: Odell, Route 1, Canehill; Rosebud, Route 2, Mt. CLIMATOLOGICAL DATA

ARKANSAS SECTION

WALTER C. HICKMON

VOL. L LITTLE ROCK, ARK., DECEMBER, 1945 No. 12

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

Unseasonably cold weather prevailed during most of December. The mean temperature was five degrees below normal for the State as a whole. It was one of the coldest Decembers on record, and the coldest and most wintry month of 1945. The coldest period of the month was from the 10th to 21st, when daily temperatures ranged from ten to twenty degrees below normal. Temperatures were almost continually below the freezing point over the northern half of the State between the 16th and 20th. The lowest temperatures of the month occurred on the 19th and 20th when minima were below zero at some northern stations and around 15° near the southern border of Arkansas. Mammoth Springs reported a low temperature of −12° on the 20th, the lowest December temperature recorded in Arkansas since 1917.

December was the driest month of the year. precipitation averaging about 50% of normal for the State as a whole. Rainfall averaged about three inches in the eastern and southeastern sections and about an inch in the northwestern counties. The heaviest snowfall of the year occurred on the night of the 17th-18th. It was heaviest in the eastern section, some stations reporting depths of three to four inches. However, the snow did not remain on the ground more than two days and interfered little with highway traffic.

Outside farm work was less than normal during December because of the unseasonably cold weather. Cotton picking, rice threshing, and some plowing were engaged in early in the month. Butchering was a major activity. Winter grains and cover crops survived the cold weather and appeared to be in good condition at the close of the month.

TEMPERATURE

The mean temperature for the State, as determined from the reports of 77 stations, was 37.7°, which is 5.0° below the 55 year average for December. The highest monthly mean temperature was 44.3° at Magnolia, and the lowest was 31.0° at Bentonville. The highest temperature recorded was 79° at Hope on the 7th, and the lowest temperature recorded was −12° at Mammoth Springs on the 20th.

PRECIPITATION

The average precipitation for the State, as determined from the reports of 104 stations, was 2.25 inches, which is 1.98 inches below the 55 year average for December. The greatest monthly total was 4.97 inches at Cummins Farm, and the least was 0.38 inch at Harrison. The greatest amount recorded in any 24 hour period was 2.08 inches at Story on the 17-18th.

All departures from normal are computed from the averages of the entire period for stations having 10 or more years of record, except that for First Order Weather Bureau Stations they are based on adopted normals. Figures and letters following stations indicate distance from the City P.O., unless otherwise indicated. T., less than 0.01 inch. ᵃ, ᵇ, ᶜ, etc., number days missing, example, ᵇindicates 2 days missing. Italics, interpolated. †And other dates. ‡Received too late to be included in means and summaries. Except as otherwise indicated, amounts are for 24 hours ending late in the afternoon. [1] Midnight to midnight. [2]Measured in the morning for the preceding 24 hours. [3]Data for 24 hours ending at 12:30 a. m. of the following day. [4]Best available used for stations not equipped with recorders. [5]Recording gage. *Included in next measurement. // Windshield on gage. /Instruments are read in the morning: the maximum temperature then read is charged to the preceding day, on which it most always occurs. ***Post Office addresses as follows: Alum Fork Reservoir, Paron; Beaty Lake, Rt. 1, Madison: Bethesda, Batesville: Big Lake Outlet, Manila: Boughton, Route 4, Prescott: Cold Springs, Olio; Cummins Farm, Gould: Devils Knob, Salus: Eagle Gap, Eagleton: Eleven Point, Route 1, Ravendon Springs: Fordyce, Route 1, Fordyce: Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock Index, Route 5, Texarkana; Lutherville, Route 1, Lamar: Moro Bay, Route 3, El Dorado: Morrilton, Route 3, Morrilton: Mulberry, Route 1, Mulberry: Odell, Route 1, Canehill: Rosebud, Route 2, Mt. Vernon: Sheridan, Hensley: Stamps, Buckner; Sugar Loaf Mountain, Heber Springs; Turnpike, Dover: Walnut Grove, Cord; White Rock, Route 2, Winslow.

CLIMATOLOGICAL DATA

ARKANSAS SECTION

WALTER C. HICKMON

VOL. L LITTLE ROCK, ARK., YEAR, 1945 No. 13

PRICE:—25 cents per year (not stamps). Remit to Superintendent of Documents Washington, D.C.

GENERAL SUMMARY

The annual temperature in Arkansas for 1945 was 60.8°, a deficiency of 0.6° from the average of 55 preceding years. It was the coolest year since 1940 and the second coolest since 1929. Considering individual stations, annual means ranged from 64.8° at Warren to 56.0° at Turnpike. Only February, March, April, and November were warmer than normal The period from May to October averaged about 2° below normal. The summer of 1945 was comfortably cool, and temperatures of 100° or higher were of infrequent occurrence. In so far as temperatures are concerned, March and December were the outstanding months of the year. March temperatures averaged more than 6° above normal, and most days were pleasantly warm. December was the coldest and most wintry month of the year and one of the coldest Decembers on record. The highest temperature reported in the State during the year was 106° at Camden on July 23d, and the lowest was −12° at Mammoth Spring on December 20th.

Precipitation was much above normal in Arkansas during the year. The average for the State as a whole was 67.56 inches, an excess over normal of 19.15 inches. It was the wettest year on record for the State as a whole, and for many individual stations. March was the wettest month with an average of 11.12 inches. Other wet months were June with 9.26 inches, February with 7.86 inches, April with 7.44 inches, and September with 7.85 inches. The December total of 2.25 inches was the least for any month of the year. The largest annual total reported by any station was 89.15 inches at Jessieville. Other stations reporting more than 80 inches during the year were Devils Knob, Eagle Gap, Mena, Mount Ida, Odell, Pine Ridge, Turnpike, and White Rock. The largest monthly total reported by any station was 18.97 inches at Pine Ridge in March. The heaviest rain reported in any 24 consecutive hours was 7.71 inches at Hope on June 11th and 12th.

A severe ice storm over most of the State on January 26th and 27th disrupted highway traffic for several days, broke many tree limbs, and crippled telephone, telegraph and power service. On April 12th a tornado killed 22 people and felled much timber in Logan, Johnson, and Madison counties. On May 1st a hailstorm caused much damage to crops and orchards in Howard, Hempstead, and Pike counties.

The weather was rather unfavorable for agriculture during the year. Excessively heavy rain in the spring delayed plowing and planting, and floods necessitated considerable replanting of crops. Cool weather during the spring and summer months retarded germination and growth, and too much rain in September delayed the maturing and harvesting of crops.

B.N.W.

FLOODS IN 1945

Several floods occurred on all the rivers of the State during the year. The April flood, however, was the most severe and destructive, with stages exceeding those in May, 1943 at many stations on the White, Black and Ouachita rivers. Eight rises to flood stage or higher occurred at Camden on the Ouachita River, and the lower portion of the river was continually in flood from the latter part of February to the middle of April. Flood stages were reached in March, April, and June on the Arkansas River. The White River at Newport was in flood from February 24th to March 16th, March 20th to May 1st, May 18th to 22d, and June 12th to June 28th. The lower portion of the White River was in flood from February to July.

In addition to the extensive damage to highways, bridges, levees, and railroads, these recurrent floods caused a large loss to farmers and planters. Large areas of fertile bottom land were inundated for considerable periods of time. In some areas the soil did not dry out until it was too late in the season to replant cotton and corn.

WEATHER BY MONTHS

January:—The month was slightly cooler and considerably drier than normal. No sub-zero temperatures were recorded in the State but freezing weather was experienced to the southern border on several occasions. Precipitation was above normal at a few stations in the southern section but was quite light in other parts of the State. Snowfall was about normal.

February:—The month was the second wettest February of record. Precipitation was more than twice the normal amount and exceeded ten inches at some west-central stations. A severe ice storm on the 26th-27th disrupted highway traffic, and crippled telephone and telegraph service for several days. Although temperatures were near normal, little outside farm work was accomplished because of the frequent rains and flooded lowlands.

March:—Unseasonably warm weather prevailed during most of March. After the first ten days, during which some freezing weather occurred, temperatures were almost continually above normal. This was the wettest March of record Some stations in the western section measured more than 18 inches of rain during the month.

April:—Mild, wet weather prevailed during the month. Precipitation was quite heavy, especially in the northern and northwestern sections. Farm activities were considerably delayed by adverse weather conditions Much land was too wet to plant or cultivate crops. Tornadoes killed twenty-two people on the 12th.

May:—With subnormal temperatures prevailing until the 23d of the month, this was the coolest May since 1931. Precipitation was slightly above normal. Planting, growth, and cultivation of crops was further delayed by cool, wet weather. Much corn and cotton had to be replanted. On the 1st, a severe hailstorm caused considerable damage to crops and orchards in Howard and adjoining counties.

June:—The month was cool and wet. This was the second wettest June in 55 years, some stations measuring more than 15 inches of rain during the month. Weather conditions were unfavorable for growth and cultivation of crops, and some growing crops were lost because of floods.

July:—This was the coolest July in many years. Only about half of the stations reported temperatures of 100° or higher. Rainfall was sufficient for crop growth, and most crops were in good condition at the end of the month.

August:—Although temperatures averaged slightly below normal over the State, it was the warmest month of the year. Precipitation averaged 88% of normal and was sufficient to maintain soil moisture in most sections of the State. All crops made good progress. Cotton picking was underway by the end of the month.

September:—Precipitation was exceptionally heavy in most sections of the State, some stations in the northwestern section measuring over 14 inches. This was the wettest September in over 20 years. The frequent rains and resulting wet fields delayed the harvesting of crops. Temperatures averaged close to normal.

October:—Temperatures averaged about two degrees below

normal during the month. Precipitation ranged from more than five inches in the southern section to less than two inches at many northern stations. Harvesting of cotton, corn, rice and other crops proceeded under favorable weather conditions.

November:—Mild weather prevailed most of the month with temperatures averaging about two degrees above normal. Precipitation was quite heavy in the eastern section but light in the northwestern district. Cotton picking progressed fairly well but there was still a considerable amount of cotton in the fields at the end of the month.

December:—This was the coldest month of the year and the coldest December in many years. Practically all stations in the State recorded their lowest temperatures of the year on the 19th or 20th. Precipitation was only 50% of normal. The heaviest snowfall of the year occurred on the night of the 17th-18th.

ARKANSAS SECTION

WALTER C. HICKMON

VOL. LI LITTLE ROCK, ARK., JANUARY, 1946 No. 1

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

Temperatures averaged about normal in Arkansas during the month. The first 11 days were quite warm but somewhat colder weather prevailed during the remainder of the month. Practically all stations recorded their highest temperatures on the 6th or 25th. The coldest weather occurred on the morning of the 27th, although minima were not so low as in many previous Januarys.

On the evening of January 6th a tornado killed six people and injured 50 others in Chicot County. The storm caused property damage in excess of $50,000. High winds on the same day caused minor property damage in other sections of the State.

Precipitation averaged more than three inches above normal in the State during January. It was the wettest January since 1937 and one of the wettest of record. The heaviest monthly totals were measured in the southeastern section, the least in the northwestern counties. The first 11 days of the month were very wet, about 75% of the month's precipitation occurring during that period. The remainder of the month was comparatively dry with general rains falling on only three days. On the night of the 15th five to ten inches of snow fell over the southern half of the State. Most of the snow melted the next day and hindered highway traffic for only a few hours.

The heavy rains that fell early in January caused floods on the White, Black and Ouachita rivers and their tributaries. Stages were not so high as last year however, and a smaller acreage of lowland was inundated.

With the exception of chores, there was little farming activity during the month. Some plowing was accomplished on the higher uplands during the latter part of the month, but in many sections the soil was too wet to work. Grains and cover crops continued in good condition.

TEMPERATURE

The mean temperature for the State, as determined from the reports of 78 stations, was 41.1°, which is 0.1° below the 56 year average for January. The highest monthly mean temperature was 45.7° at Camden, and the lowest was 34.2° at Turnpike. The highest temperature recorded was 78° at Cummins Farm on the 5th, and the lowest was 5° at Gilbert on the 27th.

PRECIPITATION

The average precipitation for the State, as determined from the reports of 103 stations, was 7.50 inches, which is 3.20 inches above the 56 year average for January The greatest monthly total was 12.91 inches at Arkansas City, and the least was 2.91 inches at Fayetteville Experiment Station. The greatest amount recorded in a 24 hour period was 5.06 inches at Marked Tree on the 8th.

All departures from normal are computed from the averages of the entire period for stations having 10 or more years of record, except that for First Order Weather Bureau Stations they are based on adopted normals. Figures and letters following stations indicate distance from the City P.O., unless otherwise indicated. T., less than 0.01 inch. ᵃ, ᵇ, ᶜ, etc., number days missing, example, ᵇindicates 2 days missing. *Italics*, interpolated. †And other dates. ‡Received too late to be included in means and summaries. Except as otherwise indicated, amounts are for 24 hours ending late in the afternoon. [1] Midnight to midnight. [2] Measured in the morning for the preceding 24 hours. [3] Data for 24 hours ending at 12:30 a. m. of the following day. [4] Best available used for stations not equipped with recorders. [5] Recording gage. *Included in next measurement. // Windshield on gage. /Instruments are read in the morning: the maximum temperature then read is charged to the preceding day, on which it most always occurs. ***Post Office addresses as follows: Alum Fork Reservoir, Paron; Beaty Lake, Rt. 1, Madison: Bethesda, Batesville: Big Lake Outlet, Manila: Boughton, Route 4, Prescott: Cold Springs, Olio; Cummins Farm, Gould; Devils Knob, Salus: Eagle Gap, Eagleton: Eleven Point, Route 1, Ravendon Springs: Fordyce, Route 1, Fordyce: Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock: Index, Route 5, Texarkana: Lutherville, Route 1, Lamar: Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill: Rosebud, Route 2, Mt. CLIMATOLOGICAL DATA

ARKANSAS SECTION

WALTER C. HICKMON

Vol. LI LITTLE ROCK, ARK., FEBRUARY, 1946 No. 2

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

Mild temperatures prevailed in Arkansas during most of February. The monthly mean temperature for the State was almost four degrees above normal, and more than three degrees warmer than the same month last year. No severely cold weather was experienced, the lowest temperatures reported ranging from 11° in the extreme northwest to slightly below freezing in the southeastern section. The highest temperatures reported were in the seventies.

Precipitation was above normal in all sections of the State during February, averaging about one and one half inches above normal for the State as a whole. The moisture was well distributed, all stations receiving adequate amounts and no station reporting excessively heavy rainfall. General rains fell in all sections on the 4th and 5th, 10th, 13th, and 19th. On the 10th the rain turned to snow over much of the State, with depths ranging up to eight inches in the northern and eastern sections. Most of the snow melted within a few hours after falling.

Some flooding occurred on most of the rivers in Arkansas during February. The lower portions of the White and Black rivers continued above flood stage until the middle of March.

With ample moisture, winter grains made good growth, and meadows and pastures were greening toward the close of the month. Some plowing was done where the soil was sufficiently dry. A few gardens were planted in the southern counties.

B. N. W.

TEMPERATURE

The mean temperature for the State, as determined from the reports of 79 stations, was 47.6°, which is 3.9° above the 56 year average for February. The highest monthly mean temperature was 53.2° at Magnolia, and the lowest was 43.7° at Bentonville. The highest temperature recorded was 78° at Benton on the 26th, and the lowest temperature recorded was 11° at Gravette on the 14th.

PRECIPITATION

The average precipitation for the State, as determined from the reports of 102 stations, was 5.05 inches, which is 1.51 inches above the 56 year average for February. The greatest monthly total was 7.51 inches at Arkansas City, and Glenwood, and the least was 2.18 inches at Lake City. The greatest amount recorded in a 24 hour period was 3.28 inches at Mena on the 12th-13th.

Errata for August, 1945

Date of lowest temperature: Oden, 25th†, Subiaco, 28th.
Total precipitation: Camp Chaffee, 2.68; Conway, 2.50.
Date of greatest 24-hour precipitation at Grannis 7th, Mammoth Spring 22d, Mountainburg 21st-22d.

MISCELLANEOUS PHENOMENA
Dates of

Thunderstorms:---3,4,5,8,12,13,23,26,27.
High Winds:---5,6,9,13,14,21,22,23,25,26.
Heavy Fog:---11,18,19,20.
Sleet:---9,10,13.

All departures from normal are computed from the averages of the entire period for stations having 10 or more years of record, except that for First Order Weather Bureau Stations they are based on adopted normals. Figures and letters following stations indicate distance from the City P.O., unless otherwise indicated. T., less than 0.01 inch. a, b, c, etc., number days missing, example, b indicates 2 days missing. Italics, interpolated. †And other dates. ‡Received too late to be included in means and summaries. Except as otherwise indicated, amounts are for 24 hours ending late in the afternoon. [1] Midnight to midnight. [2] Measured in the morning for the preceding 24 hours. [3] Data for 24 hours ending at 12:30 a. m. of the following day. [4] Best available used for stations not equipped with recorders. [5] Recording gage. *Included in next measurement. // Windshield on gage. /Instruments are read in the morning: the maximum temperature then read is charged to the preceding day, on which it most always occurs. ***Post Office addresses as follows: Alum Fork Reservoir, Paron; Beaty Lake, Rt. 1, Madison: Bethesda, Batesville: Big Lake Outlet, Manilia: Boughton, Route 4, Prescott: Cold Springs, Olio; Cummins Farm, Gould; Devils Knob, Salus: Eagle Gap, Eagleton: Eleven Point, Route 1, Ravendon Springs: Fordyce, Route 1, Fordyce: Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock: Index, Route 5, Texarkana; Lutherville, Route 1. ARKANSAS SECTION

WALTER C. HICKMON

VOL. LI LITTLE ROCK, ARK., MARCH, 1946 No. 3

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

Temperatures averaged considerably above normal during March. The first week was rather warm, followed by the coldest weather of the month from the 8th to 12th. After the 12th temperatures were almost continually above normal, and daily readings of 70° or higher were of frequent occurrence. The lowest temperatures of the month occurred on the 9th, with minima ranging from 20° at some northern stations to slightly above the freezing point near the Louisiana border. Freezing temperatures did not occur after the 12th of March. The highest temperatures were registered on the 30th and 31st, and exceeded 90° at a few southern stations.

Heavier than average precipitation was reported by most stations in Arkansas during March. The heaviest rains fell in the Ouachita River Valley where some stations measured 8 to 11 inches, and in the lower St. Francis Valley where the average was about 8 inches. Rainfall was lightest in the northwestern section where a few stations reported less than 2 inches. General and quite heavy rains fell on the 6th, 24-25th, and 27th. Snow flurries were reported in the northwestern part of the State early in the month.

The heavy rains caused sharp rises on the lower Black, Ouachita, Petit Jean, and Saline rivers. Two overflows occurred on the Ouachita River during the month, the second rise flooding much lowland at the close of the month.

Abnormally warm weather and abundant moisture caused vegetation to forge rapidly ahead during March. All fruits were considerably advanced at the close of the month, and in danger of April frosts. Plowing, garden and potato planting, oat sowing, and fruit spraying were major farm activities. Some corn was planted and cotton land was being prepared.

B. N. W.

TEMPERATURE

The mean temperature for the State, as determined from the reports of 79 stations, was 58.2°, which is 5.5° above the 56 year average for March. The highest monthly mean temperature was 61.2° at Warren, and the lowest was 54.0° at Gilbert and White Rock. The highest temperature recorded was 94° at Okay on the 31st, and the lowest was 19° at Mount Ida on the 9th.

PRECIPITATION

The average precipitation for the State, as determined from the reports of 103 stations, was 5.47 inches, which is 0.69 inch above the 56 year average for March. The greatest monthly total was 11.28 inches at Alum Fork, and the least was 1.64 inches at Beaver. The greatest amount recorded in a 24 hour period was 4.75 inches at Bee Branch on the 5-6th.

All departures from normal are computed from the averages of the entire period for stations having 10 or more years of record, except that for First Order Weather Bureau Stations they are based on adopted normals. Figures and letters following stations indicate distance from the City P.O., unless otherwise indicated. T., less than 0.01 inch. ^{a}, ^{b}, ^{c}, etc., number days missing, example, ^{b}indicates 2 days missing. Italics, interpolated. †And other dates. ‡Received too late to be included in means and summaries. Except as otherwise indicated, amounts are for 24 hours ending late in the afternoon. [1] Midnight to midnight. [2]Measured in the morning for the preceding 24 hours. [3]Data for 24 hours ending at 12:30 a. m. of the following day. [4]Best available used for stations not equipped with recorders. [5]Recording gage. *Included in next measurement. // Windshield on gage. /Instruments are read in the morning: the maximum temperature then read is charged to the preceding day, on which it most always occurs. ***Post Office addresses as follows: Alum Fork Reservoir, Paron; Beaty Lake, Rt. 1, Madison: Bethesda, Batesville: Big Lake Outlet, Manilla: Boughton, Route 4, Prescott: Cold Springs, Olio; Cummins Farm, Gould: Devil's Knob, Salus: Eagle Gap, Eagleton: Eleven Point, Route 1, Ravendon Springs: Fordyce, Route 1, Fordyce: Fort Smith Water Plant, Mountainburg: Green Mountain, Calico Rock: Index, Route 5, Texarkana: Lutherville, Route 1, Lamar: Moro Bay, Route 3, El Dorado: Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Rosebud, Route 2, Mt. Vernon: Sheridan, Hensley: Stamps, Buckner; Sugar Loaf Mountain, Heber Springs; Turnpike, Dover: Walnut Grove, Cord; White Rock, Route 2, Winslow.

ARKANSAS SECTION

WALTER C. HICKMON

Vol. LI LITTLE ROCK, ARK., APRIL, 1946 No. 4

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

Temperatures averaged more than 3° above normal during the month. It was the warmest April since 1927 and the third warmest since 1891. Unseasonably warm weather prevailed during the first eight days, and most stations recorded the highest temperature of the month on the 1st. After the 10th cooler weather prevailed, and subnormal temperatures were experienced on about half the remaining days of the month. The lowest temperatures of the month occurred on the 13th, or 17th, and were around the freezing point at a few northern stations. Some frost was reported on the mornings of those two days, but crop damage was negligible.

Precipitation averaged slightly above normal for the State as a whole. The distribution was quite uneven however, ranging from less than two inches at some southeastern stations to more than ten inches in the central portion of the State. General rains on the 9th, 15th, and 29th accounted for most of the month's rainfall. On the 29th several stations in the west-central section measured over four inches in a 24 hour period. This excessive rainfall caused quite severe flooding in the Ouachita River Valley, and inundated much bottom land for the seventh time this year.

On the night of April 15th, a severe windstorm caused considerable property damage in the southern section of the State. In the Camden and Prescott areas many trees were blown down, telephone, telegraph and power service disrupted, and some small buildings demolished.

Heavy to excessive rains in many sections of the State during April delayed the planting and cultivation of crops, and necessitated considerable replanting. Crop growth was retarded by cool nights during the middle of the month. An excellent crop of strawberries was being harvested during the last week of April. Prospects for other fruits appeared to be excellent. At the close of the month considerable cotton remained to be planted.

B. N. W.

TEMPERATURE

The mean temperature for the State, as determined from the reports of 78 stations, was 65.0°, which is 3.4° above the 56 year average for April. The highest monthly mean temperature was 68.2° at Magnolia, and the lowest was 61.4° at White Rock. The highest temperature recorded was 94° at Dardanelle and Lead Hill on the 1st, and the lowest was 30° at Mammoth Springs on the 16th and Lead Hill on the 17th.

PRECIPITATION

The average precipitation for the State, as determined from the reports of 102 stations, was 5.46 inches, which is 0.44 inch above the 56 year average for April. The greatest monthly total was 12.14 inches at Abbott, and the least was 1.75 inches at Dermott. The greatest amount recorded in a 24 hour period was 6.25 inches at Glenwood on the 29-30th.

MISCELLANEOUS PHENOMENA

Dates of

Thunderstorms:---6,7,8,9,10,11,15,16,22,23,24,25,28,29,30.
High Winds:---1,2,3,5,8,11,15,16,28,29.
Heavy Fog:---9,10,13,17,18,24,30.
Hail:---8,9,11,15,16.

All departures from normal are computed from the averages of the entire period for stations having 10 or more years of record, except that for First Order Weather Bureau Stations they are based on adopted normals. Figures and letters following stations indicate distance from the City P.O., unless otherwise indicated. T., less than 0.01 inch. [a], [b], [c], etc., number days missing, example, [b]indicates 2 days missing. Italics, interpolated. †And other dates. ‡Received too late to be included in means and summaries. Except as otherwise indicated, amounts are for 24 hours ending late in the afternoon. [1] Midnight to midnight. [2]Measured in the morning for the preceding 24 hours. [3]Data for 24 hours ending at 12:30 a. m. of the following day. [4]Best available used for stations not equipped with recorders. [5]Recording gage. *Included in next measurement. // Windshield on gage. /Instruments are read in the morning: the maximum temperature then read is charged to the preceding day, on which it most always occurs. ***Post Office addresses as follows: Alum Fork Reservoir, Paron; Beaty Lake, Rt. 1, Madison: Bethesda, Batesville: Big Lake Outlet, Manilla: Boughton, Route 4, Prescott: Cold Springs, Olio; Cummins Farm, Gould; Devils Knob, Salus: Eagle Gap, Eagleton: Eleven Point, Route 1, Ravendon Springs: Fordyce, Route 1, Fordyce: Fort Smith Water Plant, Mountainburg: Green Mountain, Calico Rock: Index, Route 5, Texarkana; Lutherville, Route 1. CLIMATOLOGICAL DATA

ARKANSAS SECTION

WALTER C. HICKMON

VOL. LI LITTLE ROCK, ARK., MAY, 1946 No. 5

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

The principal abnormalities of May weather were persistent coolness, excessive rainfall, and above average number of cloudy days. Field work and crop growth lagged, and all farm operations were considerably behind schedule at the end of the month.

Temperatures averaged almost three degrees below normal during the month, and it was the second coldest May in the past fifteen years. The first three days were quite warm with temperatures around 90° on the 2d. Cool weather predominated during the remainder of the month, and above normal temperatures occurred infrequently. The highest temperatures were registered on the 2d or 30th at most stations, while the lowest temperatures occurred on the 5th or 12th. No freezing weather was reported but light frost was observed on the morning of the 12th in the northwestern section.

May was unusually wet, precipitation being more than double the average of previous months of that name. Also, it was the wettest month since March, 1945. Rainfall was heaviest in the west-central section where some stations measured over fifteen inches, and lightest in Mississippi County where the average was about four inches. The number of rainy days was above normal, some stations reporting rain every day between the 10th and 20th. Precipitation was exceptionally heavy on the 23d and 24th over much of the State, with many stations measuring over four inches in a 24 hour period. These heavy rains caused moderate flooding along the White, Black, and Ouachita rivers.

May was too cool and wet for crop growth and field work. Cotton chopping and cultivation was possible only on the drier uplands. Considerable bottom land along the rivers was inundated with resultant loss in growing crops. Cotton and corn made poor progress, fields became rank with growth, and dry, warm weather was urgently needed at the close of the month. However, hay and feed crops made excellent growth, and pastures continued in good condition. The wet weather delayed the oat harvest, and heavy rains and wind resulted in much lodging.

B. N. W.

TEMPERATURE

The mean temperature for the State, as determined from the reports of 77 stations, was 66.4°, which is 2.7° below the 56 year average for May. The highest monthly mean temperature was 70.6° at Magnolia, and the lowest was 60.8° at White Rock. The highest temperature recorded was 93° at Pine Bluff on the 2d, and the lowest was 33° at Fayetteville Exp. Sta., Crossett and Lead Hill on the 12th.

PRECIPITATION

The average precipitation for the State, as determined from the reports of 101 stations, was 9.47 inches, which is 4.42 inches above the 56 year average for May. The greatest monthly total was 18.51 inches at Forester, the least was 4.39 inches at Osceola. The greatest amount recorded in a 24 hour period was 6.60 inches at Marianna on the 23d.

MISCELLANEOUS PHENOMENA

Dates of

Thunderstorms:---1,2,9,10,11,13,14,15,16,17,19,20,23,24,25,29,30,31.
High Winds:---2,3,10,11,17,19,23,24,25.
Heavy Fog:---1,2,11,12,16,23,24,27.
Hail:---2,10,11,12,17,18,19,20,30.

All departures from normal are computed from the averages of the entire period for stations having 10 or more years of record, except that for First Order Weather Bureau Stations they are based on adopted normals. Figures and letters following stations indicate distance from the City P.O., unless otherwise indicated. T., less than 0.01 inch. [a], [b], [c], etc., number days missing, example, [b]indicates 2 days missing. Italics, interpolated. †And other dates. ‡Received too late to be included in means and summaries. Except as otherwise indicated, amounts are for 24 hours ending late in the afternoon. [1] Midnight to midnight. [2]Measured in the morning for the preceding 24 hours. [3]Data for 24 hours ending at 12:30 a. m. of the following day. [4]Best available used for stations not equipped with recorders. [5]Recording gage. *Included in next measurement. // Windshield on gage. /Instruments are read in the morning: the maximum temperature then read is charged to the preceding day, on which it most always occurs. ***Post Office addresses as follows: Alum Fork Reservoir, Paron; Beaty Lake, Rt. 1, Madison: Bethesda, Batesville: Big Lake Outlet, Manilia: Boughton, Route 4, Prescott: Cold Springs, Olio; Cummins Farm, Gould; Devils Knob, Salus: Eagle Gap, Eagleton: Eleven Point, Route 1, Ravendon Springs: Fordyce, Route 1, Fordyce: Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock: Index, Route 5, Texarkana: Lutherville, Route 1, Lamar: Moro Bay, Route 3, El Dorado: Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill: Rosebud, Route 2, Mt. Vernon: Sheridan, Hensley: Stamps, Buckner; Sugar Loaf Mountain, Heber Springs; Turnpike, Dover: Walnut Grove, Cord; White Rock, Route 2, Winslow.

CLIMATOLOGICAL DATA

ARKANSAS SECTION

WALTER C. HICKMON

VOL. LI LITTLE ROCK, ARK., JUNE, 1946 No. 6

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

June was slightly cooler and considerably drier than normal. The weather was much more favorable for agriculture than in May, and all farm activities made excellent progress.

The mean temperature for the month was 1.5° below normal for the State as a whole, and most stations reported cooler than normal weather. The coolest weather of the month was experienced during the first week when temperatures averaged 10° below normal. After the 7th, daily temperatures ranged from slightly above to slightly below normal. This was one of the few Junes of record with no temperatures of 100° or higher reported in the State.

Precipitation was only 50% of normal during the month. It was the driest June since 1936, and the first month of the current year with deficient rainfall. Practically all precipitation resulted from thundershowers, consequently there was considerable variation in quantity measured at different stations. A few stations in the northwestern and southeastern sections measured over five inches, and two stations in the central section reported no rain during the month. The heaviest rains of the month occurred on the 25th when 24 hour totals of one to three inches were measured.

The May floods continued into June over the lower portions of the White and Ouachita rivers. Other rivers were within their banks and falling during the month.

Following an extremely wet May, the lack of moisture in June was not serious. Farmers took advantage of the favorable weather conditions to continue their planting, and clean fields which had become rank with growth. Cotton and corn showed much improvement, although stands were quite uneven. Cotton chopping was mostly completed and some blossoms were reported during the last week. Haying and harvesting of small grains were other major farm activities. Rice made good progress. Some flooding was necessary to aid germination.

B. N. W.

TEMPERATURE

The mean temperature for the State, as determined from the reports of 77 stations, was 75.6°, which is 1.5° below the 56 year average for June. The highest monthly mean temperature was 79.0° at Pine Bluff, and the lowest was 70.5° at White Rock. The highest temperature recorded was 99° at Camden on the 14th and Booneville on the 25th. The lowest temperature recorded was 41° at Lead Hill on the 4th.

PRECIPITATION

The average precipitation for the State, as determined from the reports of 95 stations, was 2.12 inches, which is 1.97 inches below the 56 year average for June. The largest monthly total was 7.46 inches at Siloam Springs, and the least was none at Boughton and Carlisle. The greatest amount recorded in a 24 hour period was 3.22 inches at Clarendon on the 25th.

All departures from normal are computed from the averages of the entire period for stations having 10 or more years of record, except that for First Order Weather Bureau Stations they are based on adopted normals. Figures and letters following stations indicate distance from the City P.O., unless otherwise indicated. T., less than 0.01 inch. ^{a}, ^{b}, ^{c}, etc., number days missing, example, ^{b}indicates 2 days missing. Italics, interpolated. †And other dates. ‡Received too late to be included in means and summaries. Except as otherwise indicated, amounts are for 24 hours ending late in the afternoon. [1] Midnight to midnight. [2]Measured in the morning for the preceding 24 hours. [3]Data for 24 hours ending at 12:30 a. m. of the following day. [4]Best available used for stations not equipped with recorders. [5]Recording gage. *Included in next measurement. // Windshield on gage. /Instruments are read in the morning: the maximum temperature then read is charged to the preceding day, on which it most always occurs. ***Post Office addresses as follows: Alum Fork Reservoir, Paron; Beaty Lake, Rt. 1, Madison: Bethesda, Batesville: Big Lake Outlet, Manilla: Boughton, Route 4, Prescott: Cold Springs, Olio; Cummins Farm, Gould; Devils Knob, Salus: Eagle Gap, Eagleton: Eleven Point, Route 1, Ravendon Springs: Fordyce, Route 1, Fordyce: Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock: Index, Route 5, Texarkana: Lutherville, Route 1. ARKANSAS SECTION

WALTER C. HICKMON

Vol. LI — Little Rock, Ark., July, 1946 — No. 7

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

Near normal weather conditions prevailed in Arkansas during July. Most major crops made favorable progress, and field work suffered only slight interruption from adverse weather.

The monthly mean temperature for the State as a whole deviated only 0.3° from the average of previous years. Generally, stations in the southern section reported slight temperature deficiencies, while warmer than normal weather prevailed in the northern half of the State. The hottest weather occurred from the 10th to the 25th, while the coolest weather prevailed during the first week of July. Temperatures of 100° or higher were recorded by a majority of the reporting stations on one or more days between the 10th and 20th.

Precipitation averaged slightly above normal in the State during July. Rainfall was adequate in all sections except the extreme northwest and along the western border where the average was less than an inch. The heaviest totals reported were 9.92 inches at Arkansas City, and 9.21 inches at Crossett. Precipitation was quite general over the State on the 19-20th and 28-29th, and accounted for most of the month's rain.

July weather was favorable for crop growth and field work. Soil moisture was generally adequate, except in the northwestern section where crops suffered from drought and high temperatures during the latter part of the month. Cotton made good progress and most of the early planted was blooming at the close of the month. Corn progressed favorably, and rice made good growth except where too dry. The harvest of truck crops was underway, but dry weather in some sections curtailed yields.

B. N. W.

TEMPERATURE

The mean temperature for the State, as determined from the reports of 77 stations, was 80.8°, which is 0.3° above the 56 year average for July. The highest monthly mean temperature was 84.7° at Arkadelphia and the lowest was 76.2° at Turnpike. The highest temperature recorded was 106° at Lead Hill on the 19th and Nimrod Dam on the 23d. The lowest temperature recorded was 51° at Corning on the 14th.

PRECIPITATION

The average precipitation for the State, as determined from the reports of 101 stations, was 3.94 inches, which is 0.23 inch above the 56 year average for July. The greatest monthly total was 9.92 inches at Arkansas City, and the least was 0.06 inch at Siloam Springs. The greatest amount recorded in a 24 hour period was 5.55 inches at Harrison on the 28th.

MISCELLANEOUS PHENOMENA

Dates of

Thunderstorms: 1,3,6,7,8,11,12,15,17,18,19,20,21,25,26,27,28,29,30.

High Winds: 1,10,11,19,25,28,29.

Heavy Fog: 3,5,19,20,31.

Hail: 19,27,29.

All departures from normal are computed from the averages of the entire period for stations having 10 or more years of record, except that for First Order Weather Bureau Stations they are based on adopted normals. Figures and letters following stations indicate distance from the City P.O., unless otherwise indicated. T., less than 0.01 inch. ^{a}, ^{b}, ^{c}, etc., number days missing, example, ^{b}indicates 2 days missing. *Italics*, interpolated. †And other dates. ‡Received too late to be included in means and summaries. Except as otherwise indicated, amounts are for 24 hours ending late in the afternoon. [1] Midnight to midnight. [2]Measured in the morning for the preceding 24 hours. [3]Data for 24 hours ending at 12:30 a. m. of the following day. [4]Best available used for stations not equipped with recorders. [5]Recording gage. *Included in next measurement. // Windshield on gage. /Instruments are read in the morning: the maximum temperature then read is charged to the preceding day, on which it most always occurs. ***Post Office addresses as follows: Alum Fork Reservoir, Paron; Beaty Lake, Rt. 1, Madison: Bethesda, Batesville: Big Lake Outlet, Manila: Boughton, Route 4, Prescott: Cold Springs, Olio; Cummins Farm, Gould; Devils Knob, Salus: Eagle Gap, Eagleton: Eleven Point, Route 1, Ravendon Springs: Fordyce, Route 1, Fordyce: Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock: Index, Route 5, Texarkana: Lutherville, Route 1. ARKANSAS SECTION

WALTER C. HICKMON

VOL. LI LITTLE ROCK, ARK., AUGUST, 1946 No. 8

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

August weather was cool and dry. Precipitation was exceptionally light in many sections of the State, and crops suffered from the depleted soil moisture.

The mean temperature for the State was 1.1° below normal, and was about the same as August, 1945. Considering individual stations, monthly mean temperatures ranged from more than 3° below normal in the northeast to slightly above normal at some northwestern stations. Warmer than normal weather prevailed during the first 18 days, while the remainder of the month was comparatively cool. The highest temperatures of the month were registered on the 9th or 17th and the lowest on the 30th or 31st at the majority of stations.

Rainfall amounted to 53% of normal, considering the State as a whole. Ample precipitation was reported from the northeastern and southwestern sections, but in the Arkansas and White River Valleys many stations measured less than an inch. There was an average of four days with rain during the month. No destructive hailstorm or windstorms occurred.

All crops made fairly good progress during the first half of August, but increasing dryness, particularly in the northwest, retarded growth during the second half of the month. Late corn, cotton, and truck crops were greatly in need of rain at the close of the month. Pastures were in poor condition and affording little feed to livestock. The dry weather reduced the yields of apples and grapes in the northwestern counties. **B. N. W.**

TEMPERATURE

The mean temperature for the State, as determined from the reports of 80 stations, was 79.0°, which is 1.1° below the 56 year average for August. The highest monthly mean temperature was 82.3° at Camp Chaffee and the lowest was 74.2° at Turnpike. The highest temperature recorded was 109° at Booneville on the 17th. The lowest temperature recorded was 43°, and occurred at Lead Hill on the 30th and Wilson on the 31st.

PRECIPITATION

The average precipitation for the State, as determined from the reports of 103 stations, was 1.87 inches, which is 1.68 inches below the 56 year average for August. The largest monthly total was 6.48 inches at Glenwood and the least was none at Carlisle and St. Charles. The greatest amount recorded in a 24 hour period was 4.78 inches at Marked Tree on the 3d.

All departures from normal are computed from the averages of the entire period for stations having 10 or more years of record, except that for First Order Weather Bureau Stations they are based on adopted normals. Figures and letters following stations indicate distance from the City P.O., unless otherwise indicated. T., less than 0.01 inch. ^{a}, ^{b}, ^{c}, etc., number days missing, example, ^{b}indicates 2 days missing. Italics, interpolated. †And other dates. ‡Received too late to be included in means and summaries. Except as otherwise indicated, amounts are for 24 hours ending late in the afternoon. [1] Midnight to midnight. [2]Measured in the morning for the preceding 24 hours. [3]Data for 24 hours ending at 12:30 a. m. of the following day. [4]Best available used for stations not equipped with recorders. [5]Recording gage. *Included in next measurement. // Windshield on gage. /Instruments are read in the morning: the maximum temperature then read is charged to the preceding day, on which it most always occurs. ***Post Office addresses as follows: Alum Fork Reservoir, Paron; Beaty Lake, Rt. 1, Madison: Bethesda, Batesville: Big Lake Outlet, Manilla: Boughton, Route 4, Prescott: Cold Springs, Olio; Cummins Farm, Gould; Devils Knob, Salus: Eagle Gap, Eagleton: Eleven Point, Route 1, Ravendon Springs: Fordyce, Route 1, Fordyce: Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock: Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Moro Bay, Route 3, El Dorado: Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Rosebud, Route 2, Mt. Vernon: Sheridan, Hensley: Stamps, Buckner; Sugar Loaf Mountain, Heber Springs; Turnpike, Dover: Walnut Grove, Cord; White Rock, Route 2, Winslow.

ARKANSAS SECTION

WALTER C. HICKMON

Vol. LI Little Rock, Ark., September, 1946 No. 9

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

The western end of an elongated "HIGH" lay over Arkansas on the first day of the month, and the leading edge (Cold Front) of a cool mass of air was approaching from the north. This "Cold Front" became stationary over Arkansas on the 2d and 3d, causing widely scattered showers and fog banks.

A storm area (LOW) located over the Central Rockies, along with a HIGH over the northeast, began to influence Arkansas weather on the 3d, and continued until about the 10th. This caused a southerly flow of air, but comparatively dry (as far as rain was concerned), over the State.

A new cool dry mass of air from the north began to move in late the 10th, and kept most of the station's temperatures below 90° till the 15th.

Moist tropical air began to climb over the cooler air covering Arkansas on the 15th, causing fairly general light rains and slightly cooler weather. About the 19th, a series of "LOWS", developing over the Rockies, began to cause a series of rapid weather changes in the State, with alternate cool masses of air from the north and warm air from the south until the 23d.

From fhe 23d till the 29th, there was a fair amount of mixing of cool and warm masses of air, but did not result in general rains until the 27th, which continued to the 29th.

The 29th saw a movement of cold air from the northeast, which overspread the State by the 30th, giving the lowest temperature of the month, 33° at Lead Hill.

The month's weather in general was not favorable for agriculture. Cotton was retarded by lack of sunshine, while most other crops were hurt by lack of rain; even leaves turned to fall-colors prematurely.

TEMPERATURE

The average temperature for the State, was 72.4°, or 1.9° below the normal. The highest temperature of the month was 100° at Searcy on the 10th. Practically all the stations reported maximum temperatures in the 95° to 99° range.

The lowest temperature of the month was 33° and occurred at Lead Hill on the 30th. In spite of this low temperature, no frost damage was reported.

PRECIPITATION

The month's precipitation was 1.86 inches below the normal with an average of only 1.48 inches over the State. The rain was rather spotty and even adjacent stations showed a large range in amounts received. Only a very small area, in the vicinity of Brinkly, Georgetown, Augusta, and Bradford, reported a near normal fall of rain for September. Hail was reported by one station: Camp Robinson on the 15th. J.C.H.

MISCELLANEOUS PHENOMENA
Dates of

Thunderstorms: 1-2, 4-6, 9-11, 15-16, 21-23, 27-29.

High Winds: 1, 10, 22-23, 30.

Heavy Fog: 1-3, 9, 11, 16-17, 19-22, 24-26, 30.

Hail: 15.

All departures from normal are computed from the averages of the entire period for stations having 10 or more years of record, except that for First Order Weather Bureau Stations they are based on adopted normals. Figures and letters following stations indicate distance from the City P.O., unless otherwise indicated. T., less than 0.01 inch. ^{a}, ^{b}, ^{c}, etc., number days missing, example, ^{b}indicates 2 days missing. Italics, interpolated. †And other dates. ‡Received too late to be included in means and summaries. Except as otherwise indicated, amounts are for 24 hours ending late in the afternoon. ^{1} Midnight to midnight. ^{2}Measured in the morning for the preceding 24 hours. ^{3}Data for 24 hours ending at 12:30 a. m. of the following day. ^{4}Best available used for stations not equipped with recorders. ^{5}Recording gage. *Included in next measurement. // Windshield on gage. /Instruments are read in the morning: the maximum temperature then read is charged to the preceding day, on which it most always occurs. ***Post Office addresses as follows: Alum Fork Reservoir, Paron; Beaty Lake, Rt. 1, Madison: Bethesda, Batesville: Big Lake Outlet, Manilla: Boughton, Route 4, Prescott: Cold Springs, Olio; Cummins Farm, Gould; Devil's Knob, Salus: Eagle Gap, Eagleton: Eleven Point, Route 1, Ravendon Springs: Fordyce, Route 1, Fordyce: Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock: Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton: Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill: Rosebud, Route 2, Mt. Vernon: Sheridan, Hensley: Stamps, Buckner: Sugar Loaf Mountain, Heber Springs; Turnpike, Dover: Walnut Grove, Cord; White Rock, Route 2, Winslow.

ARKANSAS SECTION

WALTER C. HICKMON

VOL. LI LITTLE ROCK, ARK., OCTOBER, 1946 No. 10

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

Arkansas was under the influence of a HIGH from the 1st through the 9th, with all the stations over the State reporting their highest temperatures of the month during that period.

A new mass of cold air began to move in over the State on the 9th, due to the activity of a storm area (LOW) located several hundred miles north of the State. This movement resulted in scattered showers the 10th and 11th.

The cold mass brought in a new HIGH, which ran the State's weather through the 17th. About the 15th, we were on the backside of the HIGH, and this coupled with two new storms, moving northeast out of the Southern Rockies, caused light rains from the 15th to the 20th.

During most of the period from the 21st through the 23d, we were on the backside of a HIGH, which was bringing in moist air from the Tropics, giving moderate rains over the State. On the 24th, a new mass of cold air moved in, leaving fairly heavy showers in its wake on the 24th and 25; most of the stations reporting about 2.00 inches or more.

This new mass of cold air resulted in a good HIGH over Arkansas for the remainder of the month, and fair, but cool, weather. Early morning fogs were general over the State during these last few days, but burned off rapidly a couple of hours after sunrise.

October weather in general was favorable to the harvest of matured crops. Cotton picking was delayed somewhat by the wet and cool periods, but still not much behind normal picking schedules. Fall seeding was delayed considerably, but the rains were of great benefit to the area already planted.

The rivers and streams of the State were at low stages throughout the month.

TEMPERATURE

The average temperature for the month was 63.7°, 0.9° above the 57 year average. There were no record temperatures, high or low, during the month. The high of 94° was reported from 5 different Arkansas River Valley Stations; the low of 25° from Gilbert. The southwest quarter of the State reported mean temperatures slightly below the 57 year average.

Practically all of the stations in the mountainous portion of Arkansas reported killing frost by the 12th. The growing season was continuing in the Alluvial Section of Arkansas at the of the month, due to the lack of killing frost.

PRECIPITATION

The 2.79 inch average for the State was 0.37 inch below the 57 year average of 3.16. The rain was not too well distributed over the month, as about two-thirds of the month's total fell during the period 22d to 25th. Bethesda reported the greatest monthly rainfall with 6.52 inches.

Even though the average State rainfall was below normal, the following counties reported monthly totals ranging up to more than 2.00 inches above the normal: Hempstead, Ouichita' Union, Arkansas, Phillips, Mississippi, Craighead, Lawrence, Jackson, Independence, and Stone.

MISCELLANEOUS PHENOMENA

Dates of

Thunderstorms: 10, 11, 17, 18, 19, 21, 22, 23, 24, 25, 26, 31.
High Winds: 4, 5, 10, 17, 21, 24, 28, 29, 30, 31.
Heavy Fog: 1, 2, 9, 10, 17, 19, 20, 21, 22, 24, 27, 28, 29, 30.
Hail: 24.
Killing Frost: 1, 2, 3, 11, 12, 13, 14, 15, 18, 21.
